Inspect a numbered native invoice and its sources 17

Reconcile collections and their reversals 24

Inspect compensation and reimbursement privately 25

Review a preserved Accounting cut and its artifacts 27

Trace who changed what and when 30

Read the appropriate report and private output 35

Verify read-only boundaries and hand off a finding 41

Complete the review and protect its evidence 43

Recovery · inspect, request and verify 44

Security · verify your own device and recovery options 45

Completion check · your permitted role cycle 47

Before practising · live and training access

The company portal https://j-aautomation.com/j-aautomation/app is LIVE. A link to it never enters a simulation. For practice obtain a separately provisioned training URL, your own account, the permitted fictional project and dates, a visible environment identifier and the trainer’s reset procedure. Without those, use this guide as a read-only demonstration and enter only authorized genuine work.

Original BBS examples include historical live-deployment records. Later financial training exercises used isolated copies or separate synthetic portfolios. Each chapter identifies its dataset and checkpoint. A later screenshot does not change an earlier saved workbook or issued document.

A role, project membership, review permission, supplier authorization and dated crew delegation are separate. Use your own credentials and follow the tasks assigned to your role. Check the selected project and person before recording work.

Verify the result

- Confirm your displayed identity, the environment, project number and work dates before saving. For training/reset or lost access contact admin@j-aautomation.com; send the route, role, project/record reference, time and visible error. Keep passwords, activation links, recovery codes and cookies private.

If you get stuck

- For an empty project selector, ask the Owner to check account status and assignment/authorization coverage. Do not create a duplicate project or borrow another account.

Access · activate the invitation and sign in

> **Go here:** Your trusted invitation → Activate your account → Return to sign in → Profile

Do the task

1. Check the portal address and named account against the invitation provided by the Owner. There is no public sign-up. For an already provisioned account, use the sign-in method supplied to you; do not attempt to activate someone else’s invitation.
2. For a single-use activation link, open Activate your account. Enter Full name and choose a Password of at least 12 characters, then Activate account. Wait for Account activated. You can sign in now. Do not repeatedly submit while Activating… is displayed.
3. Choose Return to sign in. Enter your account Email and Password and select Continue to workspace. If you previously enabled MFA, complete Verify your identity with the current Six-digit code and Verify and continue. Use a recovery code only through the offered Use a recovery code control.
4. Open Profile and verify the own-account name/email/role in Account security. Check the navigation and assigned project. A newly activated account can have zero assignments; activation alone does not grant project access or supplier/chief authority.

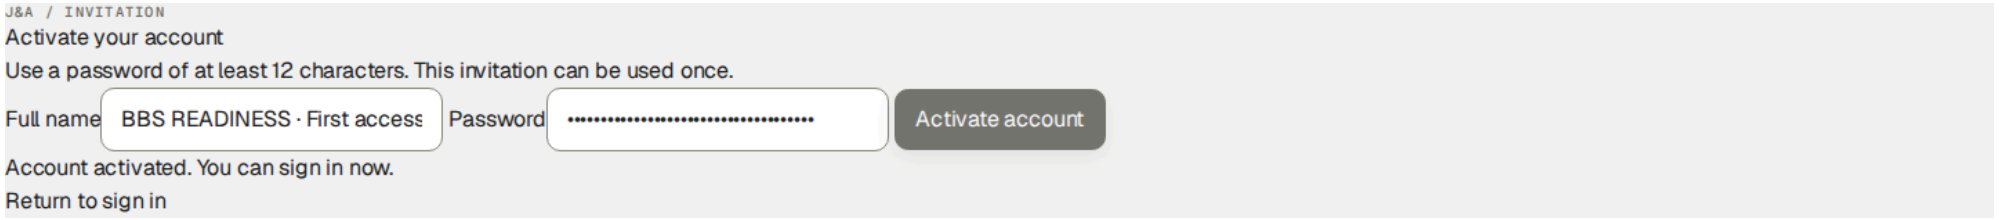

Verify the result

- The activation success message precedes the separate sign-in. The illustrated new Worker signed in and reached their own Profile; no assignment or financial permission was implied.

If you get stuck

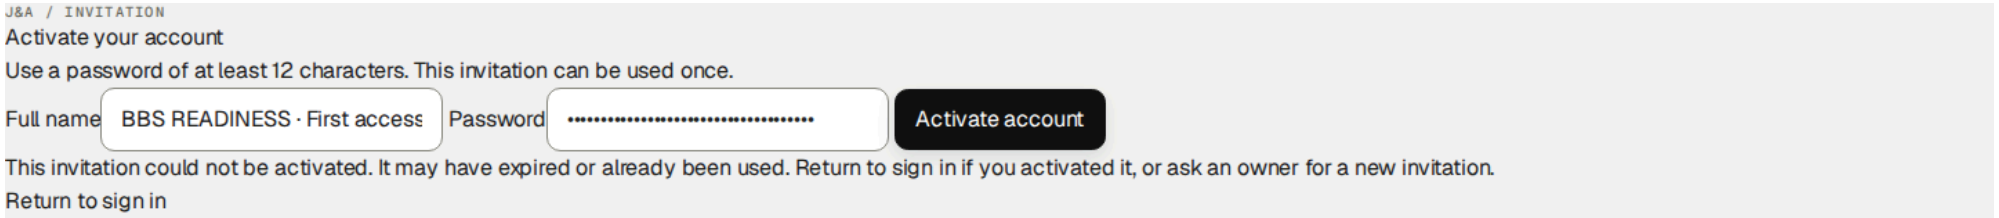

- An expired or already used link displays This invitation could not be activated. It may have expired or already been used. If activation already succeeded, return to sign in. Otherwise request a new invitation from the Owner; reloading does not renew the old link.
- For offline, temporarily unavailable or rate-limited activation, retain the entered name/password privately, restore connectivity or wait for the displayed retry interval, then retry. An unconfirmed response is not proof of an active account.
- For an incorrect password, inactive account or lost access, contact admin@j-aautomation.com from your verified account/contact channel. Supply identity and the visible error; never send the password. This guide does not promise a public password-reset form. The initial Owner is provisioned by the platform operator; an existing Owner provisions the remaining team.

Access · activate the invitation and sign in

Isolated new recipient: the native activation success message. The password remains masked; this is separate from sign-in.

Access · activate the invitation and sign in

Reusing the same single-use training invitation shows the genuine recovery message. Return to sign in if already activated; otherwise request a new invitation.

Practice setup · your account and starting records

Obtain your own training account, isolated environment, authorized project and lesson dates from the trainer. Confirm the named starting records and expected result before saving. Ask the trainer to restore the checkpoint when needed.

Checkpoint	Required starting condition
Identity and environment	Own correctly provisioned role/profile; isolated URL and visible environment identity.
Project and dates	Exact project number, timezone and unused eligible lesson dates; membership and relevant grants cover both current access and the work date.
Source state	Named source IDs and durations/amounts; ordinary starting drafts/submissions; no unrelated correction already open.
Expected outcome	Expected saved state, source count, actual total and permitted output; named receiving reviewer where needed.

Verify the result

- Confirm that the visible starting records match this lesson. If they differ or an action is unavailable, stop and ask the trainer for the correct checkpoint.

Review authority · who receives each source

Review is determined by the actual source, base role and current dated grants. Chief delegation alone grants recording, not approval. A Worker with Can review checked does not become a Project Manager or Finance user. Send a factual correction reason with every return.

Source / recorder	Operational reviewer and prerequisite	Next handoff
Internal own or chief-delegated time	Owner or Finance; assigned PM with current active Can review membership for this project.	Owner approval includes financial acceptance, defaulting pending time to billable while preserving explicit nonbillable treatment. PM approval still needs Finance review; missing rates or expense classification remain separate blockers.
External/supplier time, including coordinator own time	Authorized Owner. Supplier authorization/recorder provenance keeps these sources outside the ordinary PM time queue.	Owner approval includes financial acceptance. Verify remaining classification and configuration before invoice preparation.
Own/delegated expenses	Owner or Finance; assigned PM with current project review grant. Check factual purchase, payer and evidence.	Owner/Finance completes the required classification and reimbursement review.
Daily and Technical reports, including supplier profiles	Owner or Finance; assigned PM with current project review grant and permitted project scope.	Owner/Finance prepares the customer period report and version-bound acceptance where required.
PM’s own work	Route it to another authorized reviewer for an independent factual check. Do not infer a universal self-review prohibition solely from a job title.	Use the appropriate personal output and verify the review state.

If you get stuck

- If the intended source is absent, check source type, state, dates, assignment/review grant and supplier authorization before searching another queue. A review-enabled Worker Chief variant is not exposed by the current role model; Owner must provision the genuinely permitted reviewer role and grant. Never use a colleague’s credentials to bypass this boundary.

Current navigation, task finder and form recovery

> Current operating instructions · 17 October 2026 · earlier examples retain their dates and saved outcomes.

> **Go here:** Header → Go to section / Find a task; workspace → record search when available

Go to section opens Find a section (Ctrl/⌘ Shift K). It groups allowed destinations as Actions, Configuration and Sections. Find a task is separate (Ctrl/⌘ K): describe a task in English, Spanish or Portuguese and choose a role-available result to open its workspace or form. Choosing a task does not save, submit, approve or send anything.

Record search is a separate Records handoff that appears only when enabled for the active account. It sends the query to the workspace record search, where available records are checked against current access again. A task may also ask you to choose a record inside its destination; that local choice is part of the task flow, not the separate Records handoff.

Examples of supported task wording include “create an invoice”, “crear factura” and “criar fatura” for authorized billing roles. The matching task list depends on the current account, role and permissions. The English, Spanish and Portuguese labels in the interface can differ; the current illustrated role courses are English, and Help identifies an English-PDF fallback.

At 200% browser text scaling, forms follow a natural page flow so labels and focus remain clear. If validation fails, read the summary and follow its field link; a hidden optional section opens before focus moves to the field. Correct the value, check that the rest of your entries remain, then use the named Save or Submit action once.

Your task results are read-only. Use record handoffs to inspect authorized evidence; do not expect save, approval or invoice mutation controls.

Do the task

1. Use Go to section to locate an authorized action, configuration or section. Use Find a task when you know the outcome you want; inspect the destination and choose the correct project or record when asked.
2. Use the separate Records handoff only when it appears for your account. Open an authorized result and verify its project, owner and dates before acting. If the handoff is absent, use the role’s normal workspace and permissions.
3. On a narrow screen or at enlarged text, follow the labelled controls in their natural page order. Use a field link from the error summary to reach the correction; retained values remain available while the form reflows.

Current navigation, task finder and form recovery · continued

4. If asked about unsaved changes, stay to continue editing or deliberately leave after saving. Opening a section or choosing a task is not confirmation that a previous form saved.

Verify the result

- Before a write action, check the page heading, account, language, project, record and dates. Wait for a saved confirmation and reopen the record when needed; draft, submitted, approved, issued and sent are different states.

If you get stuck

- If a task is unavailable, use a permitted section or ask the Owner to check access. If a record search handoff is absent, the profile may not have global search; stay in the designated workspace.
- If a save response is uncertain, inspect the existing record before retrying so you do not create a duplicate. For sign-in rate limits, wait for the displayed retry interval.

Review digital cases and current financial navigation

> Current operating instructions · 17 October 2026 · earlier examples retain their dates and saved outcomes.

> **Go here:** Digital workers → case details; Finance Overview / Collections / Accounting

Your Digital workers view is read-only. Inspect recorded cases, source dispositions, snapshots, prior review reasons, draft links and permitted follow-ups. A historical case review is not fresh approval and does not certify unchanged sources.

Finance Overview, Collections / Ledger and Accounting now show clearer project links, scoped counts and filter context. An empty filtered result is not an empty portfolio; use the offered filter reset.

Do the task

1. Open the permitted case and compare project, stream and inclusive period with the intended audit scope. Read included/excluded sources and current blockers, then open authorized original records.
2. Check whether the snapshot or evidence is stale, claimed or missing. Reconcile the linked invoice’s actual state and final artifact; a provisional number is not a final issued number.
3. Use project/invoice links and the ledger register to reconcile collections and recorded reversals. Keep currencies separate and use the saved snapshot for historical outputs.
4. In Accounting inspect the existing pack register and ready formats. Record a discrepancy with source IDs, version, dates and observed state; hand it to Owner/Finance for correction.

Verify the result

- No create, refresh, review, approve, issue or policy mutation is part of Auditor work. A documented finding and receiving role are the output of this review.

If you get stuck

- If a link no longer resolves within your access, preserve the reference and ask the Owner to verify permissions. Do not infer that the record was deleted or recreate it.

Start with an individual Auditor account

> Worked example · actual newly activated Auditor account in the isolated BBS role lab. Desktop, tablet and phone navigation were inspected; this role has read-only financial access.

> **Go here:** Sign in → Finance Overview

The platform role is auditor_read_only. The Owner creates and activates your individual account. Audit work does not require sharing Owner or Finance credentials.

Use C-0050-P-20261005 — BBS · Ejemplo de manual for this worked review. The native invoices and simulated receipt/payment history are isolated training evidence, not proof of production sales, banking, accountant approval or real customer acceptance.

Normal Auditor navigation contains Finance Overview, Economic Review, Collections / Ledger, Accounting, Profile and Audit. It omits the Finance write workflow. Some authorized read destinations can be reached through linked records rather than a menu item.

Do the task

1. Verify the active account/language and choose the BBS project in financial views.
2. Open the navigation menu or More on mobile to locate secondary workspaces, then close it to read the page.
3. Record the project/date/currency scope for every comparison.

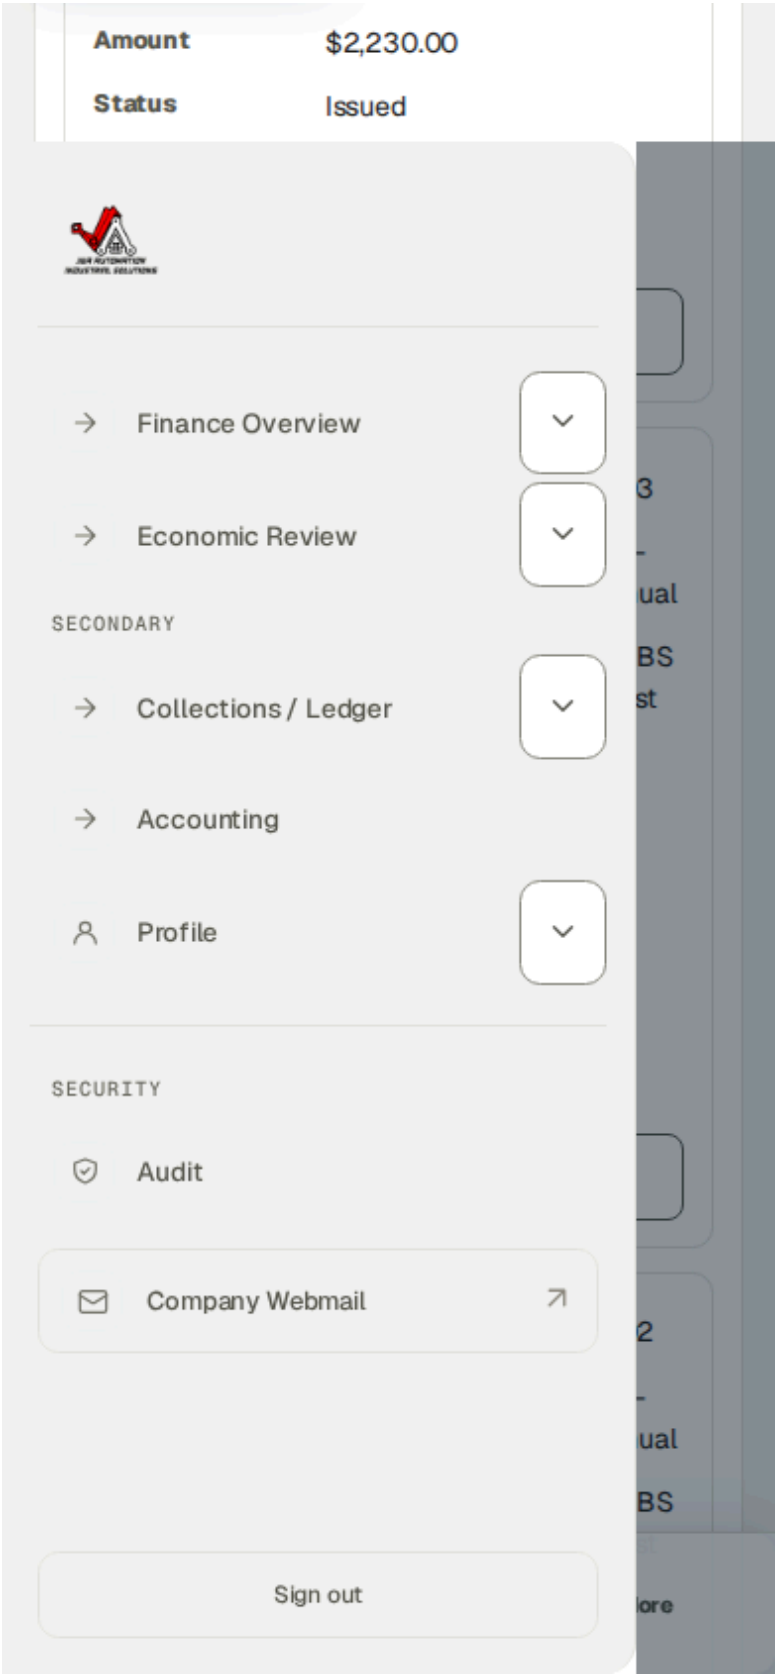

Verify the result

- The account remains Auditor and business action controls are absent. Profile changes concern your own account, not business financial records.

If you get stuck

- Missing access or a wrong role requires the Owner. Do not request a shared elevated login or assume a hidden menu makes direct write actions permissible.

Start with an individual Auditor account

Actual Auditor mobile navigation; use your own account and close the drawer to inspect records.

Reconcile a work plan with actual source hours

> Worked example · separate isolated BBS assignment lab · synthetic October 20, 2026 · authenticated Auditor browser session after operational approval

> **Go here:** Economic Review → select BBS → Source records → Time entries

Project membership permits dated access; a published planning assignment is an operational reference. Expected working hours are a separate dated schedule. None of these creates actual time, Finance review, an invoice, a compensation settlement or a payment.

The isolated October 20 exercise published eight planned hours to each of three internal workers. Their separately saved and operationally approved sources contain six hours for Technician 1, seven for Technician 2 recorded by the delegated Chief, and eight for the Chief: 21 actual hours, not the 24 planned hours. This synthetic exercise is outside the original October 1–5 financial checkpoint.

The weekly timesheet compares Actual against the effective Expected schedule. Difference is Actual minus Expected; Needs note flags a mismatch and can coexist with an Approved source. It does not mean a finalized payment or a failed operational approval. A missing expected figure is not assumed to be zero.

There is no dedicated worker-goal acceptance or completion workflow. Daily/Technical reports describe completed tasks, problems and next steps. Project milestones and commercial budgets have separate lifecycles; meeting a hours target is not evidence that a milestone is approved.

Do the task

1. Select C-0050-P-20261005 · BBS · Ejemplo de manual. Open Source records → Time entries.
2. Use Search: Source records to enter 2026-10-20. Read the filtered count, individual worker, actual hours, source state and billing state; the broader Time source records count still describes the full selected project.
3. Confirm the three Approved operational sources show six, seven and eight hours. Follow the exact source link when investigating a discrepancy; do not substitute planned hours for recorded time.

Verify the result

- The three sources are Approved and retain 21 hours of actual work. Planning did not manufacture the missing three hours.
- Auditor access is read-only. Report discrepancies to the Owner/Finance rather than editing plans, approving time or changing financial rules.

Reconcile a work plan with actual source hours · continued

If you get stuck

- Record a finding for incorrect actual work and request the state-appropriate correction from its operational reviewer. For an incorrect plan or expected schedule, send the finding to the Owner or authorized Project Manager. Auditor inspects these separate records and does not change them.
- Supplier time follows the J&A Owner operational-review handoff, whereas an authorized Project Manager may review the supplier Daily report. A missing supplier time item in the ordinary PM queue does not justify duplicate entry.

Review invoice and collection totals

> Reference procedure · checked against current source; not yet executed in this role lab

> **Go here:** Collections / Ledger → intended project/currency

Review numbered documents, their face amounts, recorded collections, reversals and outstanding balances within the selected scope. An application payment record is not independent bank evidence.

Keep project, currency, relevant dates, document IDs and the capture time with your findings. Later authorized events can change a register total.

Do the task

1. Select the intended project and currency. Open the exact invoice and its collection history.
2. Compare invoice amount minus recorded net collections to its remaining balance. Review separate credit balances using the cash reconciliation lesson.
3. Preserve the source references and relevant document versions with the finding.

Verify the result

- The selected invoice and cash-event references reconcile. A missing value is not presumed zero.

If you get stuck

- Send Finance/Owner the precise filters, document IDs, observed amounts and discrepancy. Auditor does not post balancing records.

Inspect a numbered native invoice and its sources

> Worked examples · AU01–AU02 · actual Auditor read the full BBS register and complete normal-invoice source table; originals and native issued artifacts preserved.

> **Go here:** Collections / Ledger → invoice link; direct Billing read view

The original three issued BBS training invoices remain JA-DEMO--2026-000001 USD 2,230, 000002 USD 182 and 000003 USD 2,260, totaling USD 4,672. Separate practice documents are the prior USD 1 debit 000004, normal source-based USD 600 invoice 000005 and its −USD 1 credit 000006. The historical double separator is preserved.

The complete register columns are Invoice, Client, Project (cost center/PO), Dates, Amount, Balance (receivable / credit), Status, PDF and Actions. Scroll horizontally on a small screen or read the responsive card; a viewport showing only amount/status is incomplete evidence. Dates show issue/planned and collection context, not necessarily work dates.

Invoice lifecycle, native PDF readiness and cash state are independent. An issued invoice is an immutable snapshot; linked adjustments are new documents. The upper native Invoice · PDF panel can be Ready while optional language output is Not generated yet.

Do the task

1. Open Collections / Ledger and follow an invoice, or the authorized direct Billing read view. Filter Project to BBS and retain invoice ID, number, issuer, client/project/cost center, cut, currency/tax and face amount.
2. Read all register columns. Follow the normal invoice and compare its entire one-line table with its source: Actual recorded 1 h, Qty 1 day, Unit price USD 600 and total USD 600.
3. Open the exact Time source to verify October 26, Technician 1, operational approval, Finance Billable and unchanged actual duration. Reconcile against the dated full-day rule, not a later/current hourly assumption.
4. Use the native Ready PDF download where authorized and compare its stored master with the register. Retain sensitive issuer/bank/contact data privately; public evidence can show the native state and complete source table.

Verify the result

- The normal source ID is 01a11177-53be-76f2-9eef-023d5e7d3624; invoice ID 01a1117c-ec5d-750b-be30-47caa07cb3db. Read-only corroboration records source version 4 allocated USD 600 against dated daily rule 01a10cb5-5d0e-71e9-b76c-299609468e00 effective October 5. Rule/link IDs may require an authorized support evidence extract; they are not all printed in the UI.

Inspect a numbered native invoice and its sources · continued

- The new November 1 USD 610/day agreement does not change the October issued USD 600 line. Plans, actual duration, billing quantity and worker obligation are different records.

If you get stuck

- Report a mismatch with exact invoice/source/version/rule IDs, scope and expected formula. Auditor does not edit sources, approve, issue, void or alter stored financial artifacts.

Inspect a numbered native invoice and its sources

Description / Worker	QTY	UNIT PRICE	Total / Amount
2026-10-26 · regular · SYNTHETIC READINESS FN01 FN03 one-hour invoice source; no real work. · Full unit rate (day)	1.00 day	$600.00	$600.00
Total	**1.00 day**		**$600.00**

Complete one-line normal invoice: actual 1 h, billing 1 day × USD 600.

Inspect a numbered native invoice and its sources

Exact linked operational source remains one actual hour with Billable treatment.

Reconcile collections and their reversals

> Worked example · AU03 · actual read-only comparison after Finance posted a credit, receipt and cash reversal; all are isolated synthetic evidence.

> **Go here:** Collections / Ledger

Invoice 000005 has USD 600 face amount. Its synthetic USD 1 receipt reduced invoice outstanding to USD 599; the full USD 1 reversal restores net cash USD 0 and outstanding USD 600. Credit invoice 000006 remains −USD 1 with a USD 1 available credit balance. Cash reversal did not cancel that credit or allocate it to the original invoice.

At the captured BBS cut, gross receivable is USD 4,591, credit balance USD 1, customer net outstanding USD 4,590 and net collections USD 682. The USD 600 invoice's own outstanding remains USD 600. Later authorized records can change aggregate views; retain the capture date and scope rather than asserting these are permanent totals.

Do the task

1. Select the exact BBS project/customer/currency scope in Collections / Ledger. Read invoice face amount, remaining receivable and separate credit balances.
2. Open the selected invoice's collection history and compare gross receipts minus reversals to net collected. Follow the original payment/reference and each reversal amount/date/reason.
3. Compare customer gross receivable minus available credits to customer net outstanding. Do not silently subtract a credit from another invoice's individual remaining amount.
4. Record any discrepancy in a finding with invoice/payment/reversal/credit IDs, date/currency scope and the differing measures.

Verify the result

- An application receipt is not independent bank evidence; a reversal entry does not perform a bank refund. Original documents, cash events and linked credit history remain preserved.

If you get stuck

- Inspect the linked documents and preserve a finding with invoice, credit, receipt and reversal references. Send allocation or refund questions to Finance/Owner through the approved support process: this interface has no general credit-allocation or refund-recording action. Auditor does not post cash, allocate credit or reverse payments.

Inspect compensation and reimbursement privately

> Worked example · actual Auditor inspected BBS compensation settlements and reimbursement history in Economic Review. Payment, finalization and reimbursement forms were absent.

> **Go here:** Economic Review → Source records → Settlements → Compensation settlements / Worker reimbursement queue

Review the authorized settlement and reimbursement records. Keep the relevant references in the restricted audit record and share only the necessary finding with its responsible recipient.

Check the settlement period, expected payment date and recorded payment event against the applicable instructions. There is no automatic payroll cadence setting in this release.

A finalized obligation and paid cash have separate history. The existing USD 720 reviewed settlement remains USD 720 after a USD 1 payment and its reversal. A new Custom approved adjustment compensation rule is not an automatic amendment/unlock of that final snapshot. A mistaken full expense reimbursement has no ordinary partial/backdate/reversal control in this UI; route the exact record and actual timestamp to Finance/Owner support.

Do the task

1. Select BBS and open Settlements. Check worker/project/period, Reviewed settlement, Actual paid and Remaining.
2. Read source duration as hours/minutes and money with its currency. For a fixed-period rule, zero source duration does not by itself invalidate an agreed fixed amount.
3. Inspect actual payment and reversal event references; compare the current remaining obligation.
4. Below Settlements, inspect the Worker reimbursement queue. Compare the expense reference, recorded reimbursement and supporting evidence.

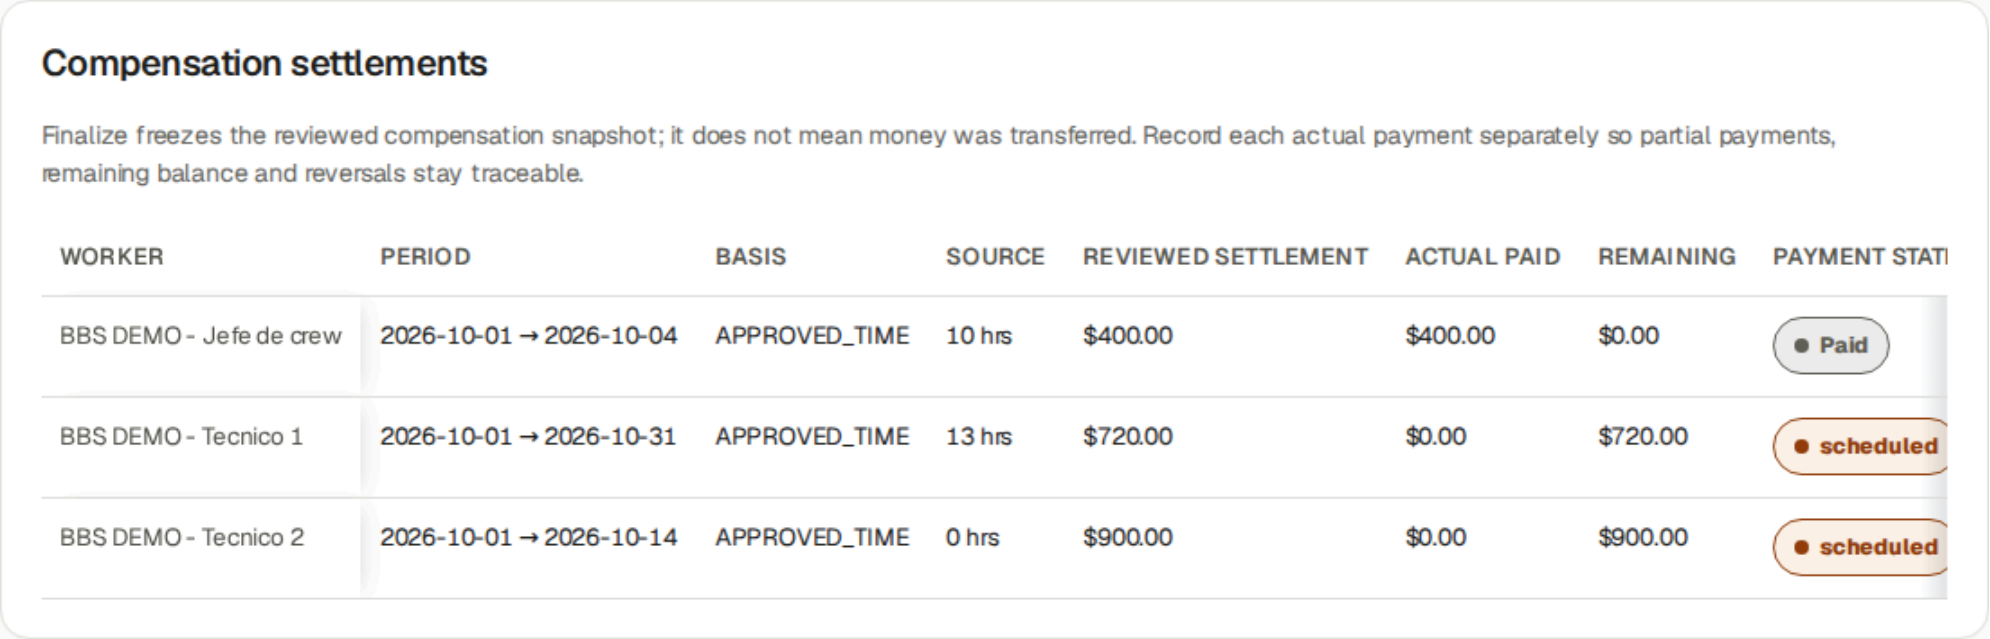

Verify the result

- Finalized obligation is distinct from transfer evidence. Company-paid purchases do not automatically create worker reimbursement. Auditor sees reviewable evidence, not finalize/pay/reimburse controls.

If you get stuck

- Give Finance the exact settlement/expense/payment ID and mismatch. Protect unrelated personnel information and use the smallest necessary restricted extract.

Inspect compensation and reimbursement privately

Compensation settlements

Finalize freezes the reviewed compensation snapshot; it does not mean money was transferred. Record each actual payment separately so partial payments, remaining balance and reversals stay traceable.

WORKER	PERIOD	BASIS	SOURCE	REVIEWED SETTLEMENT	ACTUAL PAID	REMAINING	PAYMENT STATI
BBS DEMO - Jefe de crew	2026-10-01 → 2026-10-04	APPROVED_TIME	10 hrs	$400.00	$400.00	$0.00	Paid
BBS DEMO - Tecnico 1	2026-10-01 → 2026-10-31	APPROVED_TIME	13 hrs	$720.00	$0.00	$720.00	scheduled
BBS DEMO - Tecnico 2	2026-10-01 → 2026-10-14	APPROVED_TIME	0 hrs	$900.00	$0.00	$900.00	scheduled

Actual Auditor sees reviewed worker obligations and payment status without management controls. Source durations are durations, not currency.

Review a preserved Accounting cut and its artifacts

> Worked examples · AU04 · actual Auditor read a populated BBS October 1–6 pack and downloaded all five Ready formats; separately read/downloaded Finance's finalized synthetic portfolio cut.

> **Go here:** Accounting → Accounting Pack register

A pack is an authorized portfolio cut, with exact dates/version and independent artifact states; it can contain multiple projects/issuers/currencies. The BBS October 1–6 pack is populated and has Ready PDF, XLSX, Invoice CSV, Expense CSV and JSON. Finance retained its unresolved advisories; it is not finalized.

The separate all-synthetic October 1–6 portfolio pack was generated, reviewed with zero advisories and finalized by Finance. Auditor verified final and successfully downloaded all five native formats. This separate success does not repair or replace BBS history.

Invoice inclusion follows issue dates. Frozen older source links can accompany included invoices as evidence without moving the historical source work dates to the new issue-date cut. A zero reconciliation count alone does not prove every operational source/receipt is complete.

Do the task

1. Open Accounting → Accounting Pack register. Locate the exact period/version and read current/stale/final independently from each output's Ready/Queued/Failed state.
2. Download PDF, XLSX, Invoice CSV, Expense CSV and JSON only when their authenticated Ready links are available. Verify their filenames, cut, currency and content; retain sensitive outputs privately.
3. Reconcile included invoices/cash/source references with the frozen cut and identify outside-period source work dates or omitted sources. Request Finance's review notes where needed.
4. Retain the historical final version. Request a new reviewed version from Finance for later source corrections; do not treat it as an editable live workbook.

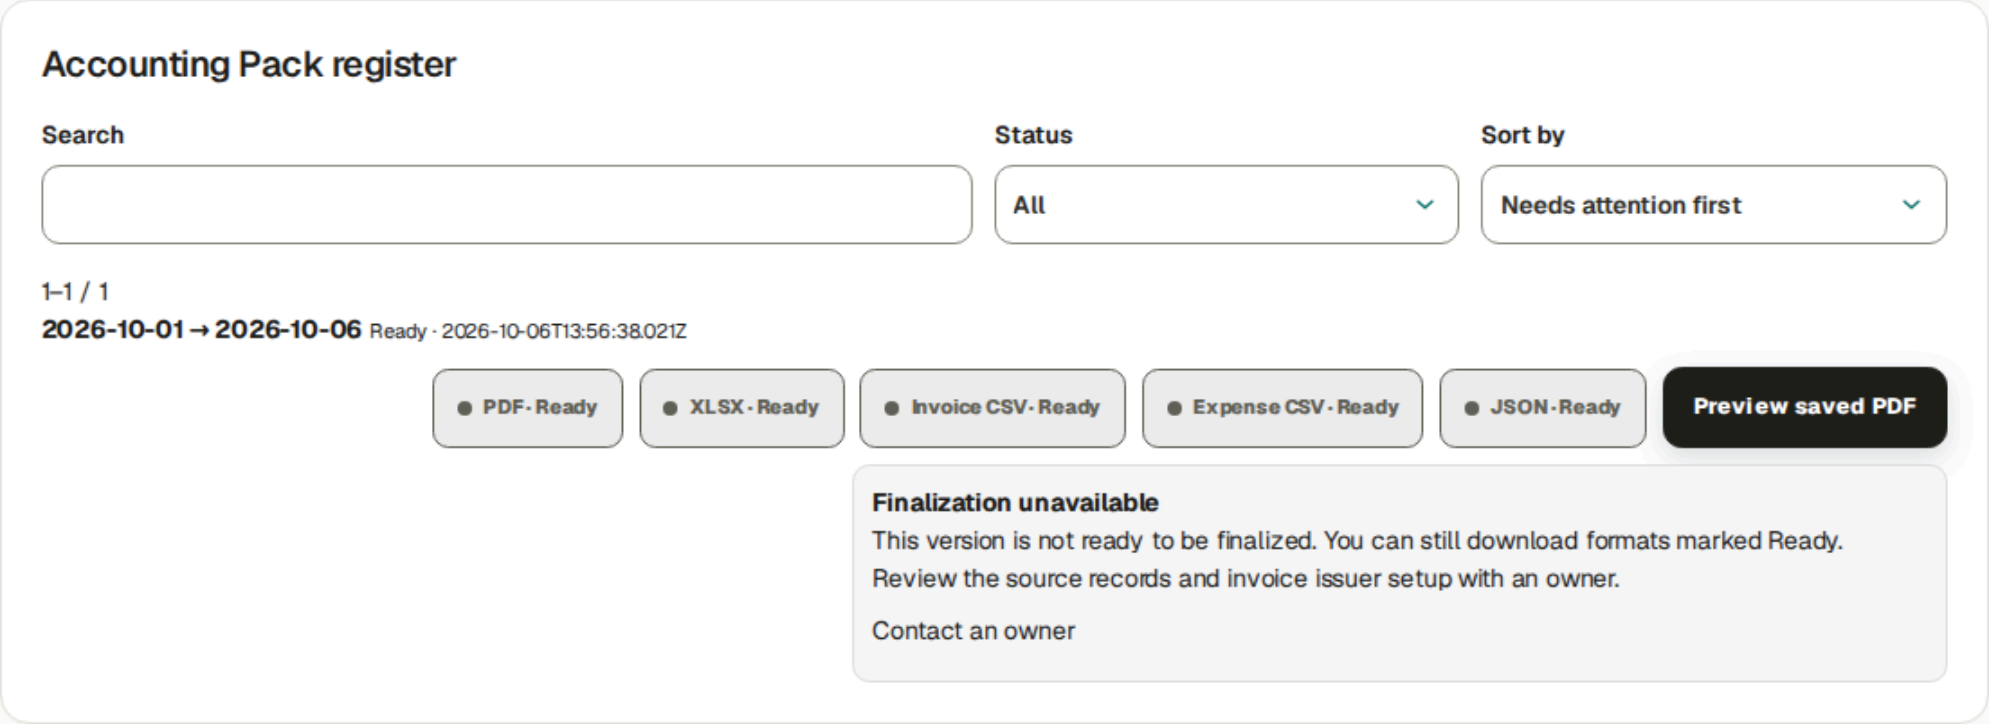

Verify the result

- Auditor has no Generate pack, Review before finalizing or Finalize reviewed version controls. The Ready count may be zero after a pack becomes final even though all five final downloads remain Ready.

If you get stuck

- Retain pack ID, period/version, artifact type/state and the exact error for Finance/Owner/support. No private-storage bypass or shared elevated session is required.

Review a preserved Accounting cut and its artifacts

Actual Auditor populated BBS portfolio pack: five native Ready download formats.

Review a preserved Accounting cut and its artifacts

Separate synthetic portfolio finalized by Finance: Auditor read-only final version and all five Ready outputs.

Trace who changed what and when

> Worked example · AU05 · actual Auditor opened native time Finance-review, invoice issue and receipt audit details; exact chain and reversal ledger were corroborated read-only.

> **Go here:** Audit

Audit shows append-only events with action, entity type/ID, UTC timestamp, Actor ID and View details. Business & security omits job-service lifecycle; Job service and All activity provide the other views. Older events / Latest events page through history; the current Audit page does not expose a dedicated actor/project/date filter form.

The tested chain is source create → submit → operational approval → Finance review → invoice draft creation → approve → issue → payment record. Owner performed the on-behalf source actions; the synthetic Finance actor performed billability and financial actions. The duplicate time.create audit rows refer to one source ID and do not mean duplicate hours.

Invoice cash reversal is preserved in its immutable reversal ledger with actor and reference. This release does not emit an ordinary audit_event row for that reversal. Correlate the ledger rather than inventing a missing Audit action. Audit UI prints Actor ID; ask Owner for a restricted ID-to-account crosswalk when a resolved identity is necessary.

Do the task

1. Use the appropriate Audit view, then Older events until the relevant UTC range. Open View details for the exact entity ID and compare its action payload with the source/document.
2. Trace source 01a11177-53be-76f2-9eef-023d5e7d3624 to invoice 01a1117c-ec5d-750b-be30-47caa07cb3db and payment 01a11184-3d1c-7608-b5cc-a240af9f46f0. Verify amount/currency, action sequence and actor authority.
3. Follow reversal 01a11184-db1f-77f3-860b-abf58cf2c4b1 in the native immutable cash ledger; preserve both receipt and reversal. Resolve actor IDs through an authorized Owner/account evidence crosswalk, never guess a name.
4. Write a finding as: scope/cut and currency; expected invariant; observed difference; invoice/source/version/rule/payment/reversal IDs; UTC actor/action evidence; impact; requested Owner/Finance action; retest evidence and status.

Verify the result

- Synthetic Finance actor ID 01a10e34-4faa-74fe-8b88-636b879e852b resolves to BBS ROLE LAB Finance. Owner-session identity remains restricted in public evidence. A missing Audit row does not justify deletion, duplicate cash or invented events.

Trace who changed what and when · continued

If you get stuck

- For missing/inconsistent evidence preserve the exact IDs and native ledger/capture; request authorized support reconciliation. Auditor reports findings and does not repair business records.

Native payment.record audit detail; cash reversal is reconciled through its own immutable ledger.

Read the appropriate report and private output

> Worked example · actual Auditor read approved fictional BBS Daily reports in both missing-PDF and Ready states. Generate/Retry were absent; Refresh remained. The Ready English report offered Download, and its authorized native GET returned 200 with a verified hash. Auditor did not generate the artifact. Customer period detail was retested at 1440 and 390 pixels after the bounded read fix: no approval, follow-up or signed-copy capture forms.

> **Go here:** Direct Reports read view → BBS → Daily / Technical · PLC

Customer-facing period reports/sign-off, internal financial reports, invoices and Accounting Packs have different audiences and purposes. Operational report approval is separate from customer acceptance against an exact report/PDF snapshot.

Use the approved document for its intended audience. Keep its source/version reference with the audit record and use authorized private downloads.

The Auditor session verified Reports read-only and an approved fictional Daily source. Its PDF was not generated. An export request was denied by the read-only boundary; an Owner/authorized creator must prepare a missing artifact. The final interface omits the unsupported Generate/Retry actions for Auditor.

A different approved BBS External Technician Daily report already had an English PDF prepared by its authorized creator. Auditor’s Ready view kept Download and Refresh while Generate/Retry remained absent. Its authenticated download returned 200, 306,944 bytes. Reading or downloading did not change the operational record or artifact.

Supported authorized read destinations include Finance Overview, Economic Review, Collections / Ledger, Accounting and Audit from navigation, plus linked Billing/invoice, Time/Expense details and Reports read views. A menu omission does not add write permission. Customer period detail authorization permits Auditor snapshot/PDF reads; an incidental reviewer-follow-up check was corrected so it no longer blocks that read. Auditor receives no approval, follow-up or signed-copy capture controls.

Do the task

1. Open /j-aautomation/app/reports?view=daily in the same signed-in portal, select BBS, apply filters and open the exact report. The normal Auditor menu has no Reports item. For Technical / PLC select its report type. Verify project, date, type, version and audience.
2. Open only Ready artifacts. A quarantined or failed uploaded file is not verified evidence.
3. If acceptance is relevant, check the evidence state, signer information and exact associated snapshot/PDF; distinguish synthetic training acceptance from a real signature.
4. Keep the original downloaded file and its source/version reference in the restricted audit record.

Read the appropriate report and private output · continued

5. Follow native record links with your own session. For customer reports verify the safe audience, exact version/hash and canonical PDF readiness; protect internal report/financial output audiences. For denied unavailable routes retain the route/record and ask Owner/support rather than borrowing a session.

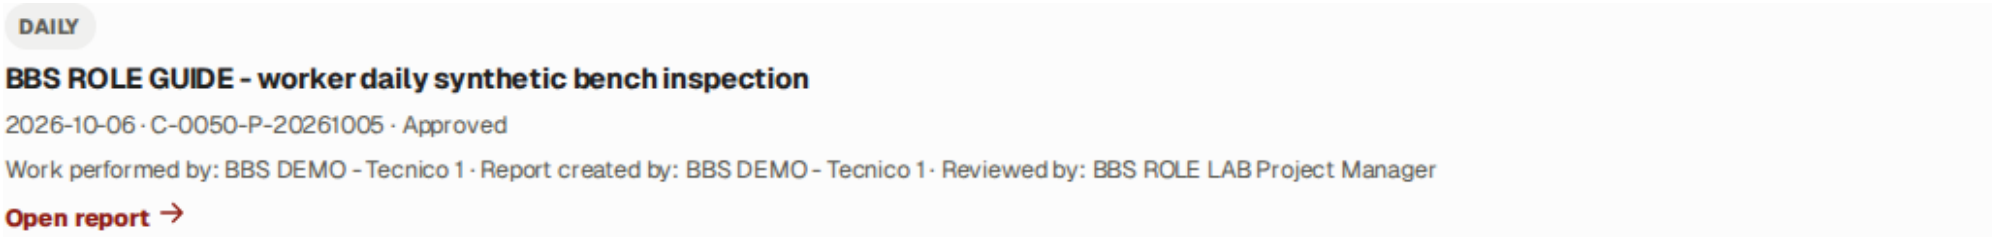

Verify the result

- Downloading does not create customer acceptance. Underlying content changes can require invalidation/replacement rather than silently reusing an old signed snapshot.

If you get stuck

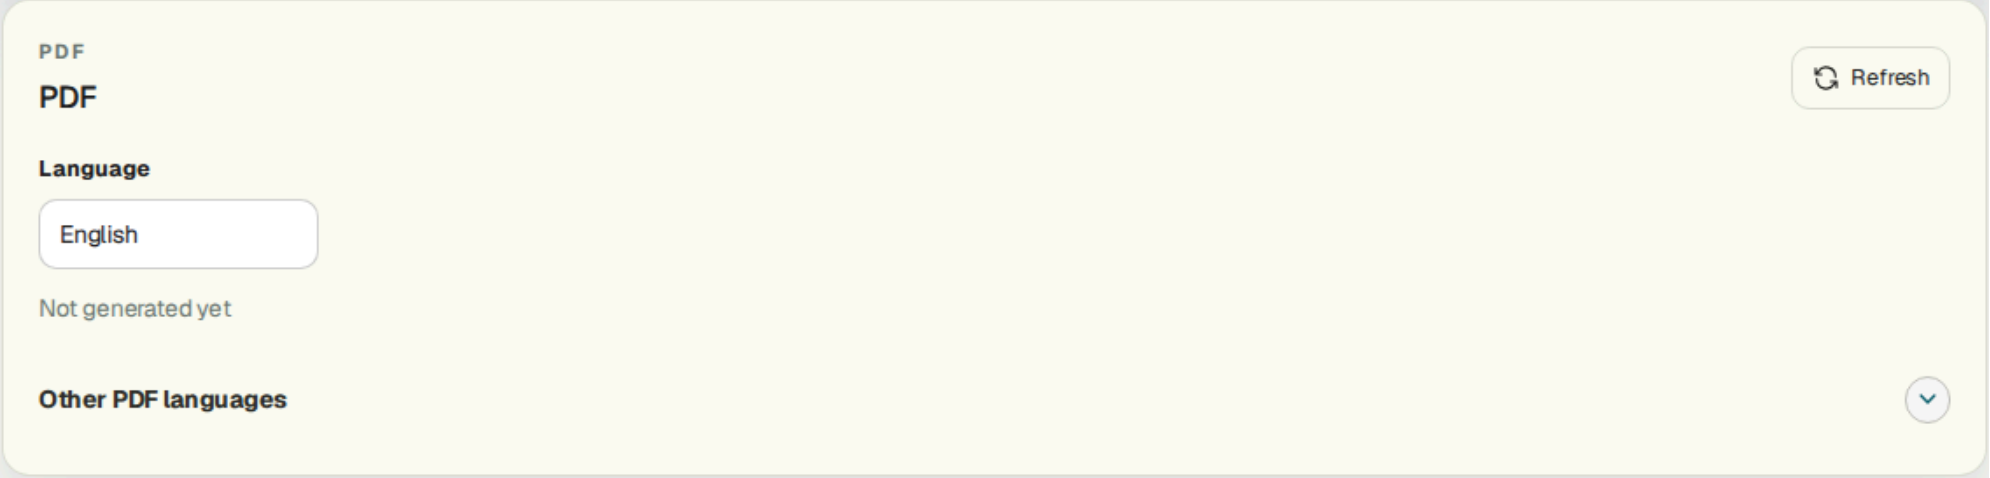

- A missing/denied report route is a scope handoff to Owner/support. Do not substitute an internal finance file for a missing customer document or claim an unobserved signature.
- If a report says Not generated yet, request its artifact from the Owner/authorized report creator. Refresh only after it is genuinely Ready; this guide does not claim an Auditor-generated Daily PDF.

Read the appropriate report and private output

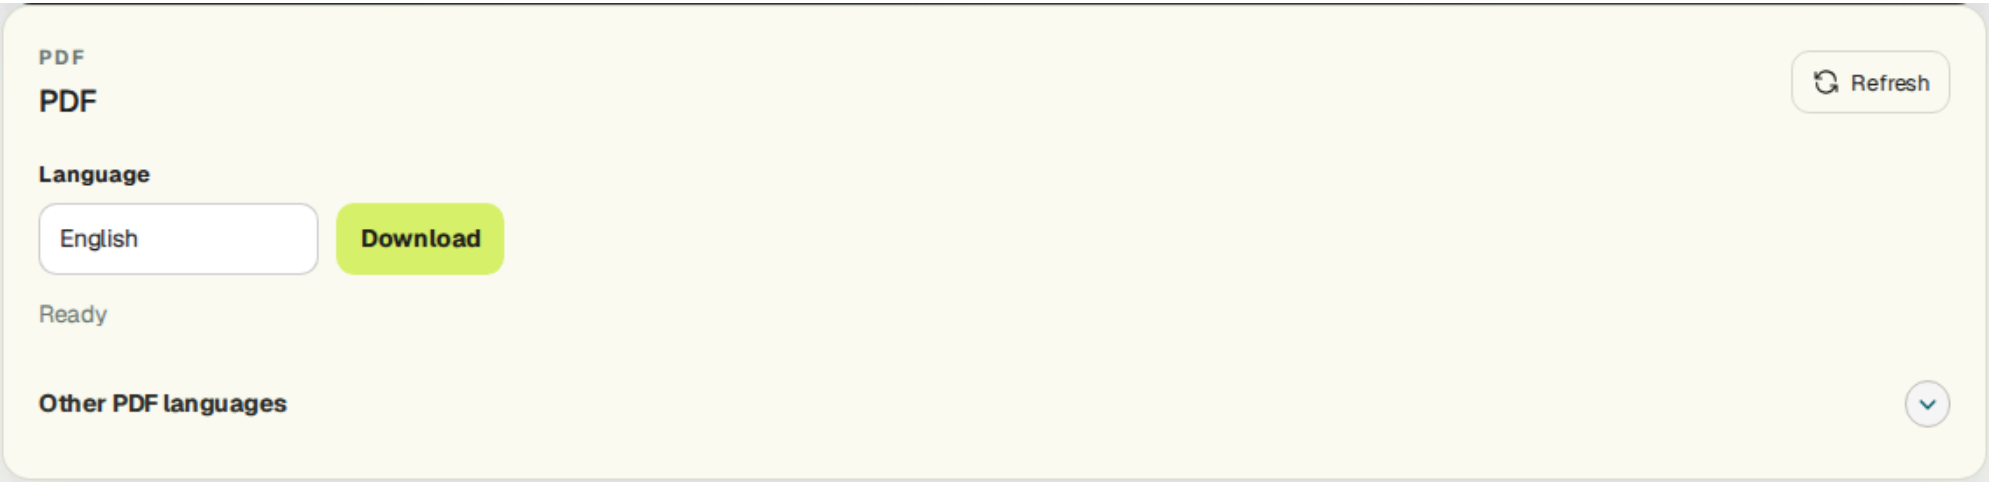

Actual Auditor read-only Daily report register; open the approved synthetic bench inspection report.

Read the appropriate report and private output

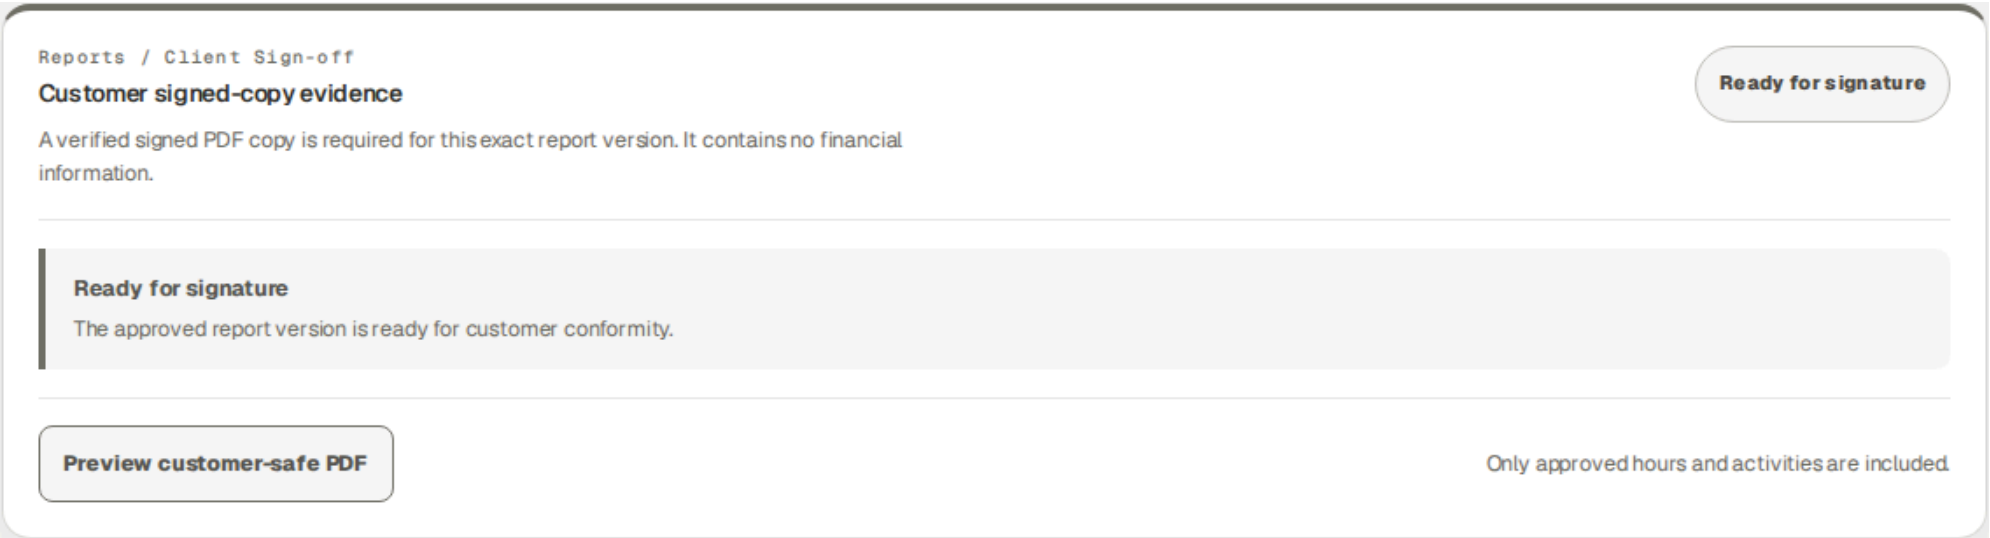

Actual final Auditor interface for a missing report PDF: Refresh and language/status remain, with no Generate or Retry control. Request creation from the authorized report owner.

Read the appropriate report and private output

Actual Auditor Ready report: Download and Refresh remain available; Generate/Retry are absent. This artifact was prepared by its authorized creator, not by Auditor.

Read the appropriate report and private output

Auditor safely reads exact approved customer snapshot and PDF readiness; financial write controls are absent.

Verify read-only boundaries and hand off a finding

> Worked example · actual Auditor opening Approvals received Access restricted. A valid controlled invoice-adjustment write returned Svelte action failure 403 / BILLING_READ_ONLY_ROLE, inside HTTP 200; invoice and adjustment counts were unchanged.

> **Go here:** Finance views; Audit; authorized denied-action example

Auditor may inspect authorized financial/audit evidence and download permitted artifacts. The role does not approve sources, change rates, create/approve/issue/void invoices, record/reverse business payments, reimburse expenses, generate/finalize packs or close billing periods.

Read-only is enforced on the server as well as by omitted controls. A copied direct Finance write action is not a supported Auditor workflow. The controlled training boundary test must not create a financial event.

Do the task

1. Check that business write controls are absent from the Auditor financial views.
2. Use the documented controlled denied-action evidence in this guide; ordinary readers do not need to submit technical requests to use the platform.
3. For a finding, record role, project/date/currency, object ID, current state, expected evidence and observed discrepancy.
4. Hand the finding to Finance or Owner with the minimum restricted supporting material.

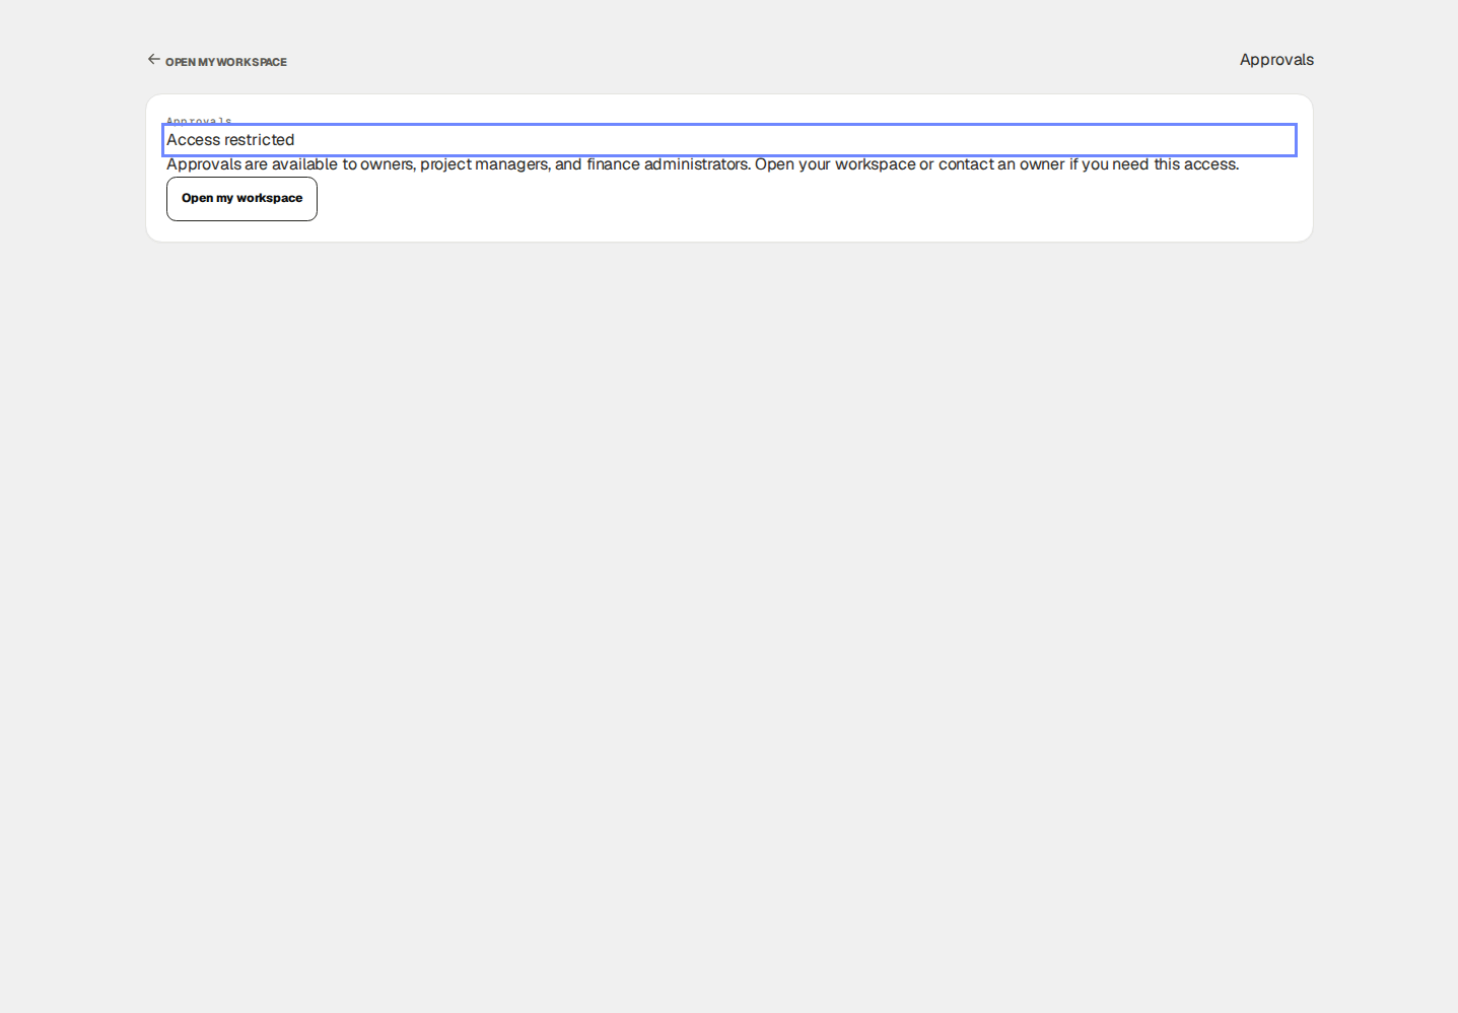

Verify the result

- The controlled denial returns forbidden and leaves native financial rows unchanged. Audit authority does not expand account/admin or record-write authority.

If you get stuck

- If a business write control appears unexpectedly, stop that action and report the exact page/control. Do not use elevated credentials to test a suspected boundary in production.

Verify read-only boundaries and hand off a finding

Approvals is unavailable to Auditor. Hand an operational or financial correction to its authorized owner.

Complete the review and protect its evidence

> Reference procedure · checked against current source; not yet executed in this role lab

> **Go here:** Profile; Notifications; Help

Keep a clear distinction between tested observations, source-checked reference procedures and unavailable external evidence. This training guide proves only the role/session/scope explicitly shown in its evidence manifest.

Your own Profile and optional account security preferences do not grant business write permissions. Notification-read state is personal inbox state, not an approval of its referenced transaction.

Do the task

1. Confirm each finding’s final project/period/version and its responsible handoff.
2. Use Profile for personal account preferences and Help for the relevant manual/support destination.
3. Close private files and sign out on shared equipment; retain financial evidence only in approved restricted storage.

Verify the result

- The report states exact observed limits: no external mail, bank transfer, genuine accountant approval or real customer signature was demonstrated.

If you get stuck

- Ask the workspace administrator about account problems or access scope; ask Finance/Owner about financial corrections. Preserve original evidence rather than editing it to match a conclusion.

Recovery · inspect, request and verify

Auditor inspects records read-only. Identify the responsible author or reviewer, preserve the source and its state, request the supported correction, then verify the original, resulting record and evidence.

State	Supported next action
Draft	Inspect the saved facts and evidence. Ask the author to correct missing or inaccurate information before submission.
Submitted	Inspect the current state and identify the authorized reviewer. Report discrepancies without submitting or reviewing the source yourself.
Needs changes or Rejected	Inspect the reason and ask the responsible author/reviewer to follow the supported correction route. Verify the resulting source and preserved history.
Approved	Document the discrepancy and request a supported correction from the responsible reviewer. Verify the original, replacement relationship and subsequent review evidence.
Issued, locked or finalized	Preserve the financial evidence and send a finding to Owner/Finance. Subsequently inspect the documented resolution and related references. Auditor does not edit, post, reverse or refresh these records.

If you get stuck

- For a support-controlled resolution, inspect the preserved original and the documented authorized outcome, including resulting references and source-lock status. Request missing evidence from Owner/Finance.

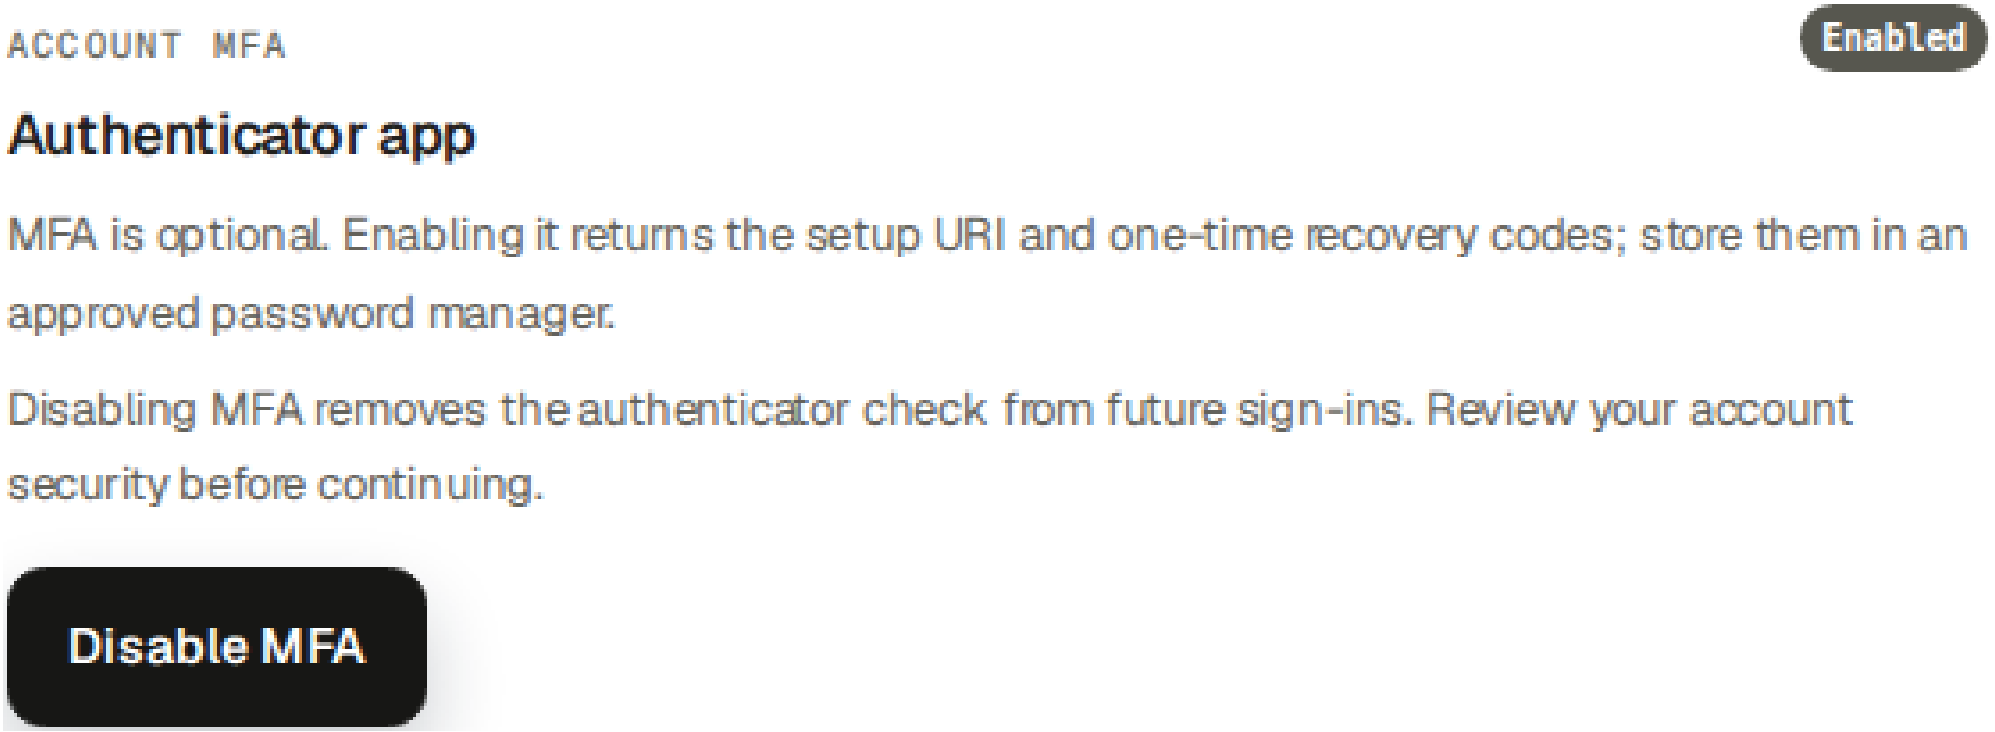

Security · verify your own device and recovery options

> **Go here:** Profile → Account security; Profile → Add availability

Do the task

1. Check Account security identifies YOUR account even when an authorized workforce profile inspection shows another worker above it. Enroll only your own device. MFA is optional in this release.
2. For a passkey, enter Device name and choose Register passkey on the approved secure portal. Complete your device's creation confirmation. Verify Passkey registered for this account, the registered count and named device row. Cancelled/failed registration is not enrollment.
3. To retire your own lost/obsolete passkey, first confirm you retain another working sign-in method. Select Revoke on the exact device and verify Passkey revoked and removal of its row. If you cannot sign in, use the verified support route rather than another person's session.
4. For an authenticator, choose Enable MFA. Keep the setup URI and one-time recovery codes private in the approved password manager. Add the URI to your authenticator, enter its current six-digit Authenticator code and choose Verify MFA. Verify Enabled and Disable MFA appear; enabling without verification is not completed enrollment.
5. At a later MFA sign-in use Six-digit code → Verify and continue. If the authenticator is unavailable, choose Use a recovery code and enter one unused stored code. If neither method is available, contact admin@j-aautomation.com for identity-verified recovery. Do not send recovery codes or the setup URI to support.
6. To remove optional MFA while signed in, choose Disable MFA and verify Not enabled/Enable MFA. Confirm the intended own account before doing so. A successful settings change is separate from recovering a lost account.
7. Where Add availability is offered, fill Starts, Ends, Availability and Note using the displayed time basis, then Save availability. Verify the saved interval/status/note in the list; use Edit availability on that row and save the changed values. Availability is not project membership, a published shift or actual hours.

Security · verify your own device and recovery options

Isolated recipient's authenticator setup was verified; the native Enabled state is shown after secret URI/recovery codes disappeared. No usable security material is published.

Completion check · your permitted role cycle

Use the worked lessons for your own role. Historical examples retain their stated dates and states. A procedure labelled reference was checked against the controls; its outcome was not necessarily executed in the illustrated session.

Verify the result

- Inspect permitted source records and outputs, record findings, request corrections from the responsible actor and verify the resulting evidence. Keep the original and resulting references. Auditor does not change or submit records.
