Worker user guide

Purpose and your private workspace

This English guide explains a Worker's own authorized portal work: assigned projects, actual time, reports, expenses, permitted documents, profile and My Pay. Figures are synthetic examples from the current validated build. Use Help and the verified support route in your invitation for access help; never share a password, MFA or recovery code, receipt, customer document, or session.

Your access is limited to your own assigned data and permitted project records. You cannot use Finance, Billing, Collections, Accounting, Audit, staff period follow-up, Closeout, or Approvals. A denial such as 403 is the current access boundary; it is not an incident to work around. You cannot see customer billing rates, revenue budgets, PO caps, internal margins, or another worker's compensation.

Sign-in, Help and optional MFA

J&A AUTOMATION · ALEX RIVERA

Help and field guides

Use these guides for the work you do in the portal. They show the real screen names and explain what each status means.

Guide language: **EN** ES PT-BR

Use the invitation linked to your mailbox
If your invitation is linked to a company mailbox, open it from that mailbox and sign in with the account it names. If you were invited as an external worker, use the single-use invitation link to create your account. There is no public sign-up.

QUICK START Revision 2026-09-09

Employee field guide

A short, task-focused guide for a normal workday: sign in, record work, send receipts and understand My Pay.

Download PDF Available languages: EN, ES, PT-BR

DETAILED REFERENCE Revision 2026-09-09

Worker user guide

The detailed reference for worker time, reports, expenses, documents and personal compensation.

Download PDF Available languages: EN, PT-BR

A normal day at a glance

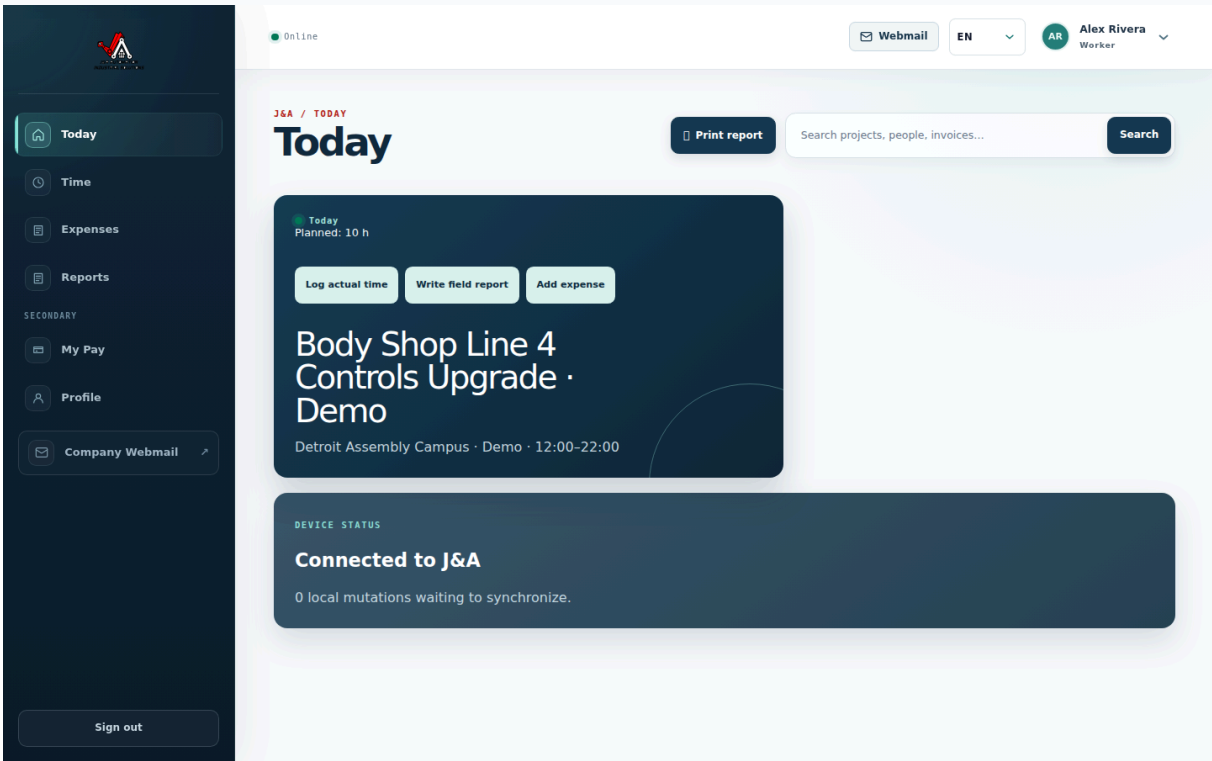

Worker tasks Record actual work and travel under the correct project. Customer minimums do not change actual hours.	Worker tasks Upload a complete receipt, choose the real payer and keep the original until the upload is confirmed.	Worker tasks Read the reason for a returned item. Approved history needs the correction flow and a reason.	Worker tasks Use Daily for a factual field summary and Technical / PLC for technical work and validation. Never sign for the customer.
Worker tasks My Pay separates			

Help lists the guides available to the signed-in role. Synthetic capture at 1440 × 900; route /app/help.

Use the invitation linked to your mailbox. There is no public sign-up. From **Help**, download the field guide or detailed worker guide available to your role. The owner/finance guide is not assigned to Workers.

MFA is optional. If you choose it in Profile, register the authenticator, verify the current code and store recovery codes privately when they are shown. Normal work does not require a step-up prompt. Sign out after using a shared device.

Today, assignments and the correct project

The screenshot displays the J&A Today app interface. On the left is a dark sidebar with navigation options: Today (selected), Time, Expenses, Reports, and a secondary section with My Pay, Profile, and Company Webmail. At the bottom of the sidebar is a Sign out button. The main content area has a top header with 'OnLine' status, a Webmail icon, a language dropdown set to 'EN', and a user profile for 'Alex Rivera Worker'. Below this is a 'Today' section with a 'Print report' button and a search bar. The central focus is a project card for 'Body Shop Line 4 Controls Upgrade · Demo' at 'Detroit Assembly Campus · Demo' with a scheduled time of '12:00-22:00'. The card shows 'Planned: 10 h' and buttons for 'Log actual time', 'Write field report', and 'Add expense'. At the bottom of the main area is a 'DEVICE STATUS' box indicating 'Connected to J&A' with '0 local mutations waiting to synchronize'.

Today shows only work that is scoped to your account. Synthetic capture at 1440 × 900; route /app.

Start on Today and open only the assigned project and task. A person can have different assignments, roles, dates and expected schedules across projects. Before adding work, confirm the project and service date. If a project is missing, or an assignment date is wrong, contact the responsible manager; do not enter work under another project.

Expected schedule hours and customer minimums do not create actual time. They may matter to planning or commercial calculation, but you must record only factual work.

Time, travel, offline capture and corrections

The screenshot shows the J&A Automation interface for logging time. On the left is a dark sidebar with navigation links: Today, Time (highlighted), Expenses, Reports, My Pay, Profile, and Company Webmail. The main content area displays a list of time records. Each record includes a date, project ID, status, and description. For example, one record is for 2026-08-11, project C-0001-P-001, with a status of 'Standby / waiting · 60 min · Approved' and a description 'Waited for production clearance before live-cycle test.' Below the list is a form to 'Log time'. The form has a title 'Log time' and a note 'Operational entry only. Commercial rules are applied separately.' It includes a section 'Capture actual work' with the instruction 'Enter what happened on site, not its commercial interpretation.' Below this are fields for 'Assigned project' (a dropdown), 'Date' (a text input with a calendar icon), 'Operational category' (a dropdown), 'Actual duration (minutes)' (a text input), and 'Activity summary' (a larger text input). At the bottom right of the form are 'Cancel' and 'Save draft' buttons.

Time records factual actuals under the selected assignment and date. Synthetic capture at 1440 × 900; route /app/time.

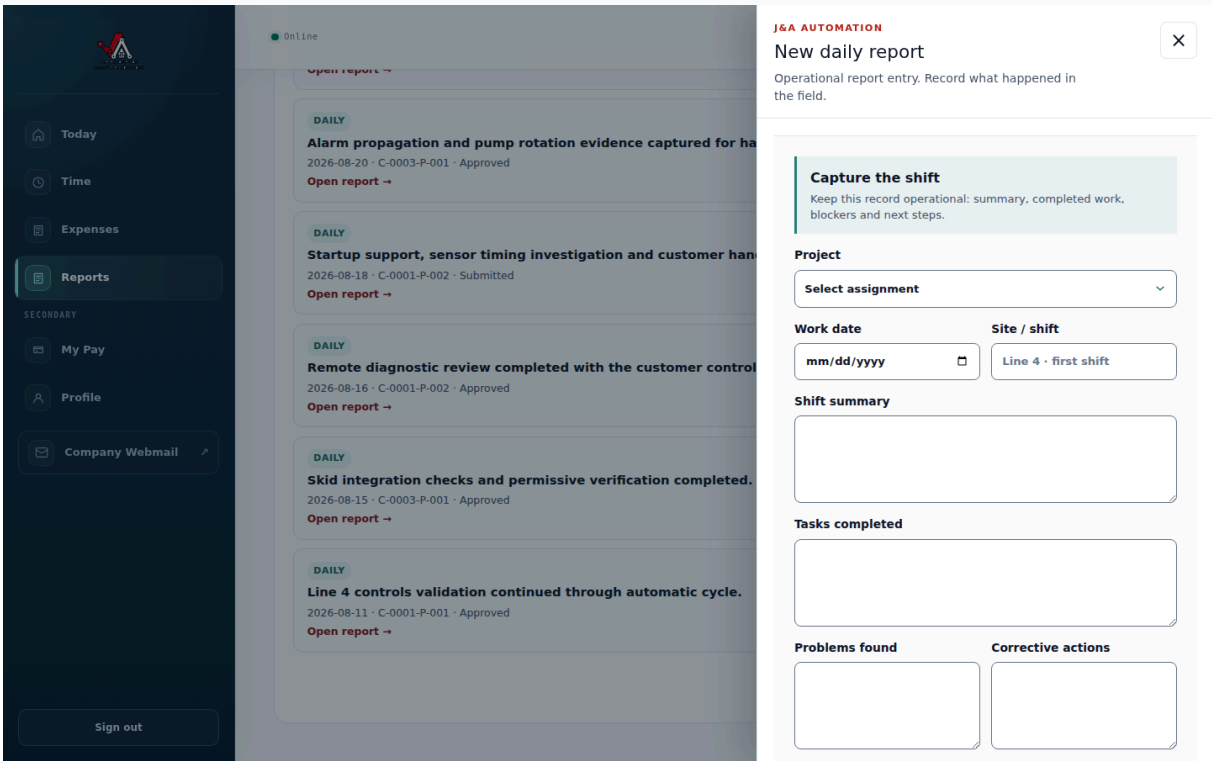

1. Open **Time**, choose the assigned project and the actual service date.
2. Record the activity and actual duration. Record travel separately only when the project workflow permits it.
3. Check the date, duration and factual description, then save or submit through the displayed workflow.
4. If a reviewer returns an item, read the reason and submit the requested correction. Approved history stays visible; use the correction path with a real reason instead of deleting, duplicating or overwriting it.

Offline capture is conditional. Use it only while the portal says it is enabled and the authenticated offline identity is valid. Keep the device secure. Reconnect and confirm the saved/synced result; a sync conflict means the server changed since the offline edit and needs review. If offline is unavailable, wait for connection and retry the same draft rather than creating a duplicate.

Time fields and state

Use the Time form's **Project**, **Work date**, **Category**, **Minutes** and **Summary** fields. Select **Save draft** when the record is incomplete or needs checking; select **Submit** only after the factual entry is ready for review. Open your own returned record, correct the named field or summary, and submit it again. You cannot approve your own item. If the project, category or date is unavailable, do not guess a substitute; ask the manager to correct the assignment.

Daily and Technical / PLC reports

The screenshot displays the J&A Automation worker interface. On the left is a dark sidebar with navigation options: Today, Time, Expenses, Reports (highlighted), My Pay, Profile, and Company Webmail. The main area shows a list of 'DAILY' reports with titles like 'Alarm propagation and pump rotation evidence captured for ha', 'Startup support, sensor timing investigation and customer han', 'Remote diagnostic review completed with the customer control', and 'Skid integration checks and permissive verification completed.' Each report includes a date, ID, status, and an 'Open report' link. On the right, a 'New daily report' form is open, titled 'Capture the shift'. It includes fields for Project (a dropdown), Work date (mm/dd/yyyy), Site / shift (Line 4 · first shift), and sections for Shift summary, Tasks completed, Problems found, and Corrective actions.

Reports capture factual work; a Worker never creates customer acceptance. Synthetic capture at 1440 × 900; route /app/reports.

Use **Daily** for a factual field summary. Use **Technical / PLC** for the system, work performed, validation, remaining risks and permitted attachments. State what occurred and what remains unresolved. Never claim a test passed when it did not.

Submit a report for review through the displayed workflow. Internal approval does not equal customer acceptance. Do not sign for a customer, upload a signature for a customer, record period follow-up, or reuse an attachment from another report or version.

Daily, PLC and attachment procedure

For **New daily report**, choose the project and complete **Work date**, **Site / shift**, **Summary**, completed work, problems found, evidence, open items and next-day plan. Select **Save daily report**, reopen it, then select **Submit** when factual and complete.

For **Technical / PLC**, choose **New technical report** and enter the report date, system/site/area/station, platform/controller/HMI/network/software/program reference, work and validation evidence, result, open risk and recovery or next action. Save the PLC report, then submit it when ready for review. To attach permitted evidence, use **Attachment kind**, select the file, give the factual description and choose **Upload private evidence**. If a report is approved or finalized, attachments are immutable: create the audited correction draft rather than replacing evidence.

Expenses, receipts and private files

Description

Expenses use the actual payer and supporting receipt. Synthetic capture at 1440 × 900; route /app/expenses.

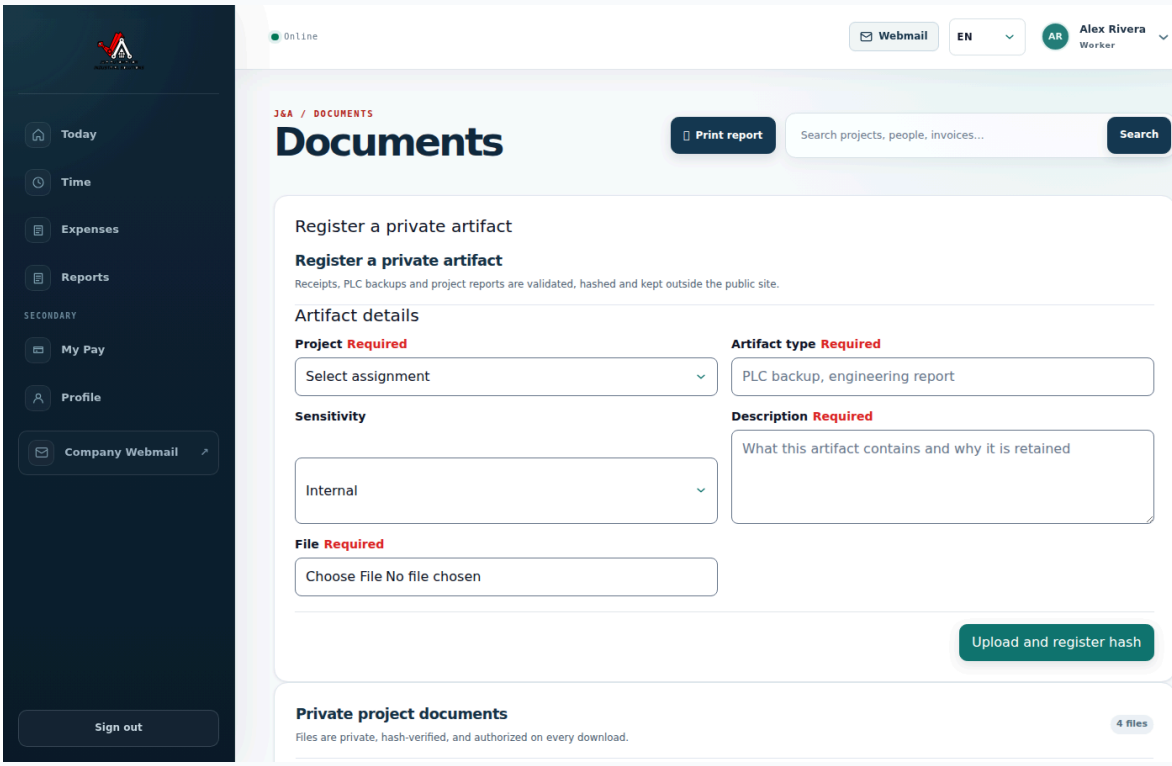

Choose the correct project, service date, category, exact amount/currency, actual payer and business reason. Select yourself only if you actually paid the expense. Attach only a readable permitted JPEG, PNG or PDF receipt, then retain the original until the portal confirms the upload.

An uploaded file is still private and status-controlled. If it is pending scan/quarantine, rejected, unavailable or the upload reports an error, read the message, correct the file or connection issue and retry from the same authorized record. Do not create duplicates, alter evidence, upload credentials or unrelated customer data, or submit a company-paid purchase as a personal advance.

Expense fields and correction

In **Expenses**, use the visible Project, Date, Category, Amount, Currency, Payer, receipt and reason fields. Check that the Payer is the person who actually paid. Save the draft before leaving a partially complete record; submit only after the receipt and factual fields match. When an item is returned, correct the stated issue and resubmit that item. A reimbursement state is not customer billing and an expected reimbursement date is not proof of payment.

Project documents and attachments

The screenshot displays the 'Documents' section of the J&A application. On the left is a dark sidebar with navigation links: Today, Time, Expenses, Reports, My Pay, Profile, and Company Webmail. The main content area is titled 'Documents' and includes a 'Print report' button and a search bar. The primary form is 'Register a private artifact', which contains the following fields:

- Project Required:** A dropdown menu labeled 'Select assignment'.
- Artifact type Required:** A text input field containing 'PLC backup, engineering report'.
- Sensitivity:** A dropdown menu labeled 'Internal'.
- Description Required:** A text area with the placeholder 'What this artifact contains and why it is retained'.
- File Required:** A file selection button labeled 'Choose File No file chosen'.

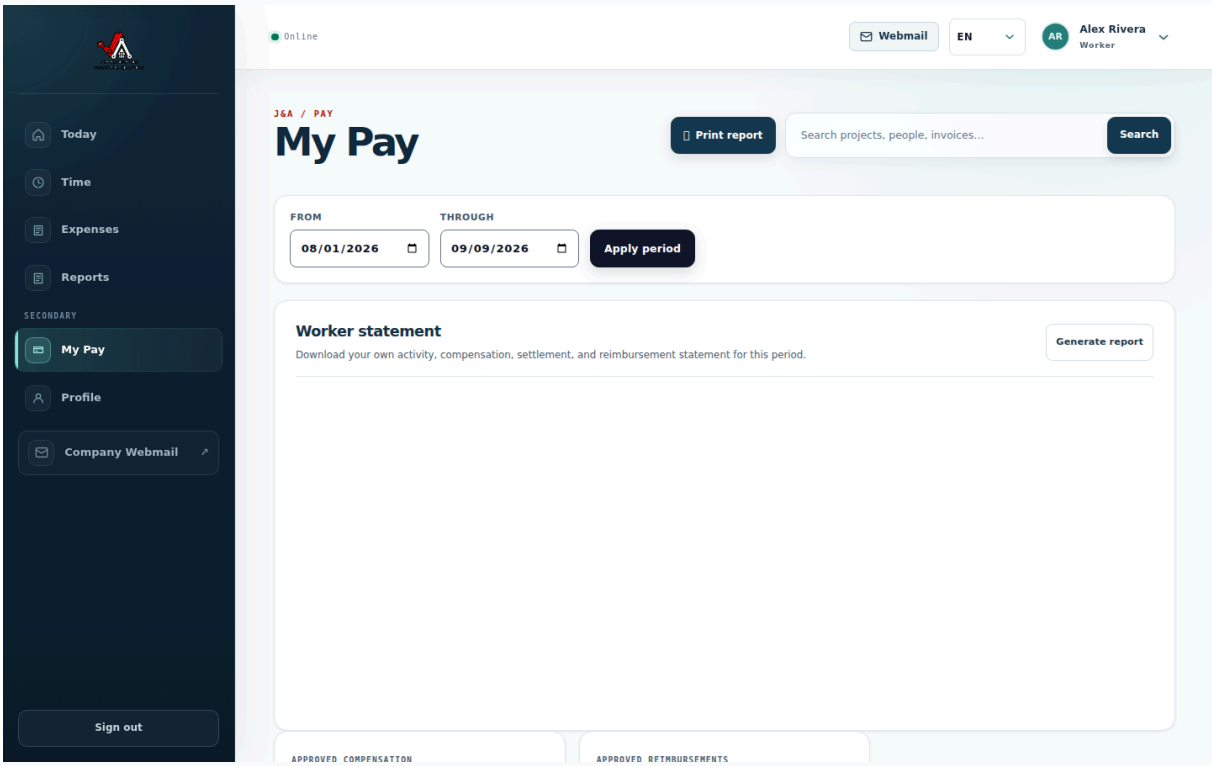

An 'Upload and register hash' button is located at the bottom right of the form. Below the form, a section titled 'Private project documents' states: 'Files are private, hash-verified, and authorized on every download.' and shows a count of '4 files'.

Documents are private project artifacts with object-level authorization. Synthetic capture at 1440 × 900; route /app/documents.

Use **Documents** only for a permitted project artifact. Confirm project, intended audience and access scope before upload or download. The portal checks authorization and file integrity; possession of a link does not grant access. A clean/available status is required before a file can be used where the workflow requires it.

Use report attachments only through the relevant report workflow and permitted attachment kind. If you cannot open a document, it may be outside your project or role scope. Do not ask another worker to download it for you.

My Pay: own-data privacy and truthful status

My Pay is private to the signed-in worker. Synthetic capture at 1440 × 900; route /app/pay.

My Pay shows only your own approved activity, compensation/reimbursement detail and allowed statement artifacts. It is not a customer invoice, tax document or proof of a bank transfer. Never infer a customer rate, internal margin or another person's pay from it.

- **Estimated** is a working calculation.
- **Approved** means authorized review accepted the record or amount.
- **Scheduled** means a payment is planned for the displayed expected date.
- **Finalized** means the compensation record's calculated truth is closed; it does not confirm a transfer.
- **Paid** requires the recorded actual payment date. A scheduled or finalized item is not proof of payment.

Download only your own ready statement artifact. If an artifact is queued or running, wait for the service. If it failed, use the shown error/support process; you do not run jobs manually. Report a discrepancy through the verified support route with the relevant record reference, never with another person's data.

Statement, settlement and reimbursement detail

Use the Worker statement controls to choose the available period and request the supported statement artifact for your own record. A ready artifact can be downloaded only through the displayed download control. The statement separates activity, compensation, settlement and reimbursement data. Review the project/period, expected payment date and actual settled/paid date separately. A missing actual date means the portal has not recorded a confirmed payment.

WORKFORCE PROFILE

Skills and availability

Keep your own workforce profile current without exposing compensation or client rates.

Add Skill

Remove Skill

Scroll horizontally to review all columns.

SKILL	PROFICIENCY	VERIFIED
ControlLogix programming	5/5	Verified
Industrial networks	4/5	Verified
PLC commissioning	5/5	Verified

Profile controls your own language, availability and optional security settings. Synthetic capture at 1440 × 900; route /app/profile.

Keep your own skills, availability and language accurate. This does not change project permissions or grant commercial access. Activity Inbox notifications may link to a permitted source record; opening or marking one read is not approval.

Profile and security procedure

Use Profile to update only your own language, skills and availability. Select **Register passkey** only on a device you control. If you choose **Enable MFA**, complete the setup and select **Verify MFA** with the current authenticator code; store one-time recovery codes privately when shown. Do not register someone else’s device or share codes. These settings do not change your Worker permissions.

Stop and contact verified support when access is denied, an assignment is missing, a record conflicts with factual evidence, an upload fails after the safe retry, or a payment status is unclear. Do not bypass a role, create a duplicate record, run a background job, or use email as the system of record.

Current validated application identity: a64b6893d204f33f .
