Daily work and review

1. Owner

Set up access

Create the project; verify site timezone, team dates and required permissions. Publish plans separately from actual work.

2. Worker / external technician

Capture actual facts

Digital workers → Open work capture → Review facts → Create server drafts. Add original evidence and submit each record.

3. Crew chief / supplier coordinator

Record authorized team work

Use Crew hours or Supplier team for delegated entries. Work capture creates own records only. Coordinator uses the supplier workspace.

4. Authorized reviewer

Review original records

PM needs a current review grant. Supplier time goes to Owner. Accepting a follow-up does not approve time, expenses or reports.

Time, Daily report and Expense drafts are separate sources. Planning and expected hours never create actual time. Technical reports remain in Reports.

Project to invoice

1. Owner / Finance

Resolve prerequisites

Owner time/expense approval includes financial acceptance; PM approval still needs Finance review. Check classification, dated terms, issuer, tax and evidence.

2. Owner / Finance

Choose invoice scope

Project Work/Billing offers selected-record or whole-period creation. Inspect existing draft reservations. Provisional numbers are not final identifiers.

3. Owner / Finance

Optional digital case

Digital workers → Apply filters → Open case → inspect snapshot → record current review → Create invoice draft. Refresh/review again after source changes.

4. Owner / Finance

Issue and collect

Review the draft, approve and issue through invoice controls. Wait for Ready final PDF; send deliberately. Record collection only with genuine payment evidence.

Case review is not invoice approval. The case composer covers labor/expense streams; fixed/milestone billing continues through its existing workflow. Issued history stays immutable.

Follow-ups, automation and audit

1. PM / permitted coordinator

Assign the next step

Create Scope change, Handover or Evidence follow-up with project, eligible owner, due date and authorized evidence references. Supplier Coordinator uses its separate workspace.

2. Assigned internal worker

Report progress

Open → In progress → Ready for review. Update factual evidence. External technicians do not receive internal follow-up controls.

3. Authorized reviewer

Decide from evidence

Check current / claimed / missing / stale references. Handover acceptance needs current supporting evidence; waiver needs a reason. Preserve terminal decisions.

4. Auditor

Inspect and report

Read cases, source versions, review reasons, invoice links and Accounting artifacts. Hand findings to Owner/Finance; no mutation or new approval.

Due follow-ups create one in-app notification per current owner/deadline. OCR and supported on-device dictation aid text entry only. Policy proposals never apply settings automatically.
