# Before you practise · access and scope

---

This English guide uses BBS · Ejemplo de manual, project C-0050-P-20261005. The screenshots were taken using the stated role in an isolated database running the application. Training entries, payments, approvals and documents are fictional. They do not prove a real bank transfer, accountant approval or customer acceptance.

The company portal at <https://j-aautomation.com/j-aautomation/app> is LIVE. Training uses a separate URL and database. Before practising, obtain the isolated URL, your own role account and permitted exercises from the company administrator; verify the BBS project number. Without isolated access, treat these screenshots as read-only demonstrations and perform only authorized real work.

Use your own credentials. Do not borrow an Owner, Finance or colleague account. A platform role, project assignment, review permission, supplier authorization and dated crew delegation are separate requirements. Changing one does not automatically grant the others.

Select English in the workspace language control to follow the labels used here. Some saved BBS record names remain in their original language. On a phone open the navigation drawer to see full workspace names. Recheck the selected project and date range after every navigation.

The eight Worker test accounts in the private credentials document use the same Worker workflow. Crew chief is a dated delegation attached to a Worker account. Supplier Coordinator and External Technician are restricted profiles attached to Worker accounts. This guide never includes account passwords.

Each screenshot is an exercise checkpoint. Later fictional role entries and financial events are additional to the original October 1–5 workbook totals. Reopening the project or selecting the same dates does not restore that checkpoint. Read captions before comparing amounts or states.

The assignment and expected-hours supplement uses a separate isolated October 20–23 synthetic exercise. Project access, a published work plan and a dated working-hours target are separate records. Workers record actual work and report progress independently; a plan never creates actual hours or a payment.

## Verify the result

- Confirm your displayed account, role or supplier profile, the project number and the dates before saving.
- For training access, scope or reset help, contact the company administrator at [admin@j-aautomation.com](mailto:admin@j-aautomation.com). Include the role, route, project number, time and visible error; omit passwords, cookies and private customer or worker documents.

# Before you practise · access and scope · continued

---

## If you get stuck

- An empty project selector often means missing or expired assignment or authorization. Ask the Owner to check coverage for the date you are entering; do not create a duplicate project.
- A form shown in a screenshot can depend on role, source state or effective date. Use the documented role handoff when a control is absent.

# Start with your own account

---

Isolated BBS role lab · genuine Worker account · fictional October 2026 records

**Go here:** [Sign in](#) → [Today](#)

Use the individual active Worker account provisioned by your Owner. Person, account, project assignment and approval permission are separate. An invitation or password does not itself assign a project. This course uses BBS DEMO - Tecnico 1 and Tecnico 2 in C-0050-P-20261005 · BBS · Ejemplo de manual.

Before practising, obtain an operator-provided training URL, your own training account, a visible deployment identifier, permitted scope and reset instructions. This guide does not supply a shared training login. Live company portal links open the live company service; they never enter the isolated demonstration. Do not enter simulated work, expenses or payments in the live portal.

Today is your landing page. Time records actual work; Expenses records purchases and evidence; Reports records daily and technical facts; My Pay shows your own compensation and reimbursements; Profile manages your workforce profile and security. Notifications and Help are in the navigation. Crew hours is useful only when the Owner has granted applicable delegation.

## Do the task

1. Sign in with your own account. Confirm the account, language and environment before entering data.
2. On Today inspect assigned projects and published plans. Open the BBS project or use Log actual time, Write field report or Add expense.
3. On a phone use More for additional destinations; close the navigation drawer before entering a form.

## Verify the result

- The active project and person agree with your intended work. No other person's credentials are needed.

## If you get stuck

- Ask the Owner to activate the account or correct project assignment if your project is missing. Do not create duplicate people or share accounts.

# Start with your own account

Worker Today: native own-account navigation and assigned BBS project.

# Read a plan without creating actual hours

---

Isolated BBS role lab · genuine Worker account · fictional October 2026 records

**Go here:** [Today](#) → [Upcoming assignments](#)

Planning is a reference. The PM published a fictional October 16 assignment from 08:00 to 10:00 UTC with two planned hours. The Worker sees it under Upcoming assignments. Publishing this plan did not create a timesheet, compensation settlement or customer invoice.

Check the timezone displayed by the page and the work date on the source. The isolated runtime Today date is October 5 UTC; later dated role exercises are explicit training examples.

## Do the task

1. Read project, start/end and Planned hours. Open project for the assigned project context.
2. After the work, use Time and record the actual duration and activity independently.

## Verify the result

- A two-hour plan can coexist with zero actual hours for that date. Actual time appears only after it is saved.

## If you get stuck

- Ask the PM/Owner to correct an incorrect or missing published plan. Record genuine authorized actual work rather than copying a plan into fictitious hours.

# Read a plan without creating actual hours

Actual Worker 2 upcoming published two-hour plan; no October 16 actual time was created.

# Follow a published assignment through actual work and review

Isolated BBS planning lab · synthetic October 20, 2026 work · genuine role sessions · no production hours

**Go here:** Today → Upcoming assignments → Time → Submit this week

Three controls have different purposes. A dated project assignment gives you project access. A published planning assignment describes intended work. The effective working schedule supplies the Expected hours in your weekly Time view. None records the work for you.

In this connected training exercise, the Owner published October 20, 08:00–16:00 UTC with eight planned hours for the fictional Chief and Technicians 1 and 2. Each person saw their own assignment card. Before anyone saved time, there were zero actual hours for that date.

Technician 1 then recorded six actual hours personally. The Chief recorded seven hours for Technician 2 through dated crew delegation and recorded eight Chief hours separately. These are synthetic future-dated training records in an isolated copy; do not copy them into the live portal.

## Do the task

1. Open Today → Upcoming assignments. Read the project, date, UTC interval, site and Planned hours. Open project displays your permitted project context.
2. After genuine work, open Time → Log time. Select Assigned project and Date, enter Actual duration and Activity summary, then Save draft. In the illustrated exercise, Technician 1 saved six hours rather than copying the eight-hour plan.
3. Check the saved register and weekly row. Select the correct week with Week of → Open week. Use Submit or Submit all week drafts only after checking every draft in that displayed week.
4. An authorized Owner or Project Manager reviews the submitted internal-worker source in Approvals. Refresh your own Time view to see the resulting state; submitting or receiving a plan does not approve it.
5. If the Chief already recorded your hours, inspect the existing source before adding another. The seven-hour delegated source belongs to Technician 2 and is visible in that worker's own Time view; it is not seven Chief hours.

## Verify the result

- The connected browser test ended with one approved source per person: Technician 1 six hours, Technician 2 seven hours, Chief eight hours. No time was created by publishing the plan.
- Your operational screens do not disclose client charge rates, internal labor costs, margins or colleagues' compensation. Own pay remains a separate personal view.

# Follow a published assignment through actual work and review · continued

---

## If you get stuck

- Ask the Owner/PM to correct an inaccurate published plan. You do not edit it from the assignment card.
- Explain real progress and a shorter or longer shift in your Activity summary and Daily/Technical report. Record actual work rather than padding hours to match a target.

# Follow a published assignment through actual work and review

Technician 1 sees the October 20 eight-hour plan under Upcoming assignments. Today is October 6 in this isolated snapshot; project membership exists although no plan is published for today.

# Follow a published assignment through actual work and review

Native Technician 1 Log time form: six actual hours are entered independently of the eight-hour plan. This is synthetic isolated training work.

# Read Expected, Difference and Needs note correctly

Isolated BBS planning lab · synthetic October 20, 2026 work · genuine role sessions · no production hours

**Go here:** Time → Week of → Open week

The Owner configures the project's effective working schedule in minutes for each weekday. In this training scope, the schedule is effective October 19 with 480 minutes on Monday–Friday and zero on Saturday/Sunday. Eight expected hours are a planning target; they do not create hours, compensation settlements or invoice lines.

Expected is determined from dated project membership and its effective schedule, rather than by adding published plans. A three-hour published plan can therefore coexist with an eight-hour daily Expected figure. Where the application cannot determine an unambiguous target, it displays a dash instead of inventing one.

Difference means actual minus expected for that day. After operational approval, Technician 1 shows 6.00h Actual, 8.00h Expected and –2.00h Difference; Technician 2 shows 7.00h, 8.00h and –1.00h. Both weekly rows say Needs note because approved actual work differs from the target. The underlying time sources remain Approved.

Needs note is an explanatory comparison status. This exercise found no dedicated Add note or Clear Needs note control and it did not block the PM from approving accurate time. A report explaining the difference does not automatically remove this comparison label.

The final additional training checkpoint is later than the earlier weekly screenshots. The Owner gave Technician 1 another project membership covering October 23 only. Two own project assignments now cover that Friday, so Expected and Difference are —. This means an unambiguous target is unavailable; it does not mean a zero-hour schedule, missing actual source or missing saved BBS plan. The earlier tables correctly show Friday eight expected hours and a forty-hour week before this extra membership.

## Do the task

1. Open Time, select the week containing the work date, and click Open week.
2. Read the daily row, not just the weekly total. A partly completed week can show a large negative weekly Difference because future or unworked scheduled days have zero actual hours.
3. Check the source record's own approval state separately from the weekly comparison status.
4. On a phone, use the daily card with its labelled Actual, Expected, Difference and Status fields. Open day entries opens the matching actual sources.

# Read Expected, Difference and Needs note correctly · continued

---

## Verify the result

- Technician 1:  $6 - 8 = -2$  hours. Technician 2:  $7 - 8 = -1$  hour. Chief:  $8 - 8 =$  zero hours, with an Approved weekly status.
- Approval records operational truth; it does not redefine the working schedule or turn a planning target into a contractual pay or customer charge rule.
- In the later browser test, Friday October 23 showed Actual 0.00h, Expected — and Difference —; October 20 remained six actual versus eight expected hours,  $-2.00$ h and Needs note. No second-project actual hours were created. The current project selector still showed only the permitted BBS project.

## If you get stuck

- If Expected is a dash, ask the Owner to check dated project membership and effective schedule coverage. Before the October 1 membership in this example, September 28–30 have no Expected figure.
- If multiple project assignments make the target ambiguous, ask the Owner to investigate the allocation. Do not pick a target by adding plans or duplicating time.

Worker-view comparison after an October 21 plan was updated to three planned hours: the dated working schedule still supplies eight Expected hours. Planned hours do not overwrite Expected. This is the earlier checkpoint, before the additional October 23 one-day membership; its Friday eight-hour expectation and weekly forty-hour target remain correct for that saved stage.

# Read Expected, Difference and Needs note correctly

Later isolated checkpoint, after an additional one-day project membership on October 23: Friday Actual is zero and Expected / Difference are unknown (—). October 20 remains six actual versus eight expected hours. Earlier weekly tables precede this added membership and correctly show Friday eight expected hours. This operational crop contains no prices, costs or compensation.

# Handle a missing plan and understand what a work goal means

Isolated BBS planning lab · synthetic October 20, 2026 work · genuine role sessions · no production hours

**Go here:** Today → Your assigned projects; Time; Reports

A project assignment and a published plan are separate. The Today screen can say No published assignment for today while Your assigned projects contains the project. The page explicitly allows actual work to be recorded for authorized projects; absence of a planning card is not evidence that project access was removed.

There is no worker task-goal lifecycle with Accept, Reject or Mark completed buttons on these cards. The work target is planning context. Record progress and outcomes in Activity summary and Daily/Technical reports, then submit through the normal review workflow. Project milestones are separate project checkpoints.

Crew delegation adds dated permission for a Chief to record selected colleagues' actual work. It does not publish plans, create a team-wide agenda, expose colleagues' compensation or grant operational approval authority.

## Do the task

1. If no plan is shown, inspect Your assigned projects and confirm the work date. Ask the Owner/PM whether they intended to publish a plan for that date.
2. If a permitted project is missing from Log time, ask the Owner to check account status, assignment dates and project availability before entering work elsewhere.
3. If the card's dates, site or hours are incorrect, ask the plan manager to Save assignment changes. Continue to record accurate actual work within valid authorization.
4. Use your Daily report for completed tasks, remaining work, issues and handover; use a Technical report for specific technical findings or changes.

## Verify the result

- No assignment-card acceptance or completion click is required or available. Saving/submitting actual records and reports provides the operational handoff.
- Desktop, tablet and phone native screens were checked. The phone work card and weekly daily card retain their labels without horizontal page overflow.

# Handle a missing plan and understand what a work goal means · continued

---

## If you get stuck

- An expired project assignment or crew delegation is different from a missing plan. Ask the Owner to review the appropriate dated access record; a plan alone does not grant permission.
- Escalate with the project, work date and record state. Keep credentials, client prices, costs and other workers' pay out of reports and screenshots.

# Save and inspect actual time

---

Isolated BBS role lab · genuine Worker account · fictional October 2026 records

**Go here:** Time → Log time

The first exercise saved four actual hours on October 6 for Worker 1. The fictional activity states that no live equipment was changed. Decimal hours represent duration: 3.5 means three hours thirty minutes, not three hours five minutes.

Category describes operational activity. Selecting Overtime does not by itself promise a premium; approved compensation rules determine money. Add start/end times is optional; do not invent clock times from duration. Add meal expense with these hours is a separate expense input.

## Do the task

1. Open Log time. Select Project and Date; choose the operational category and enter Actual hours and Activity summary. Fill offered site/detail fields with facts.
2. Use Save draft. Open the saved row and check person, date, project, category and actual duration before submitting.
3. Use individual Submit on the time detail. Confirm Submitted; saving a draft alone does not send it for review.

## Verify the result

- Native saved row and detail showed 4 h, first Draft then Submitted. The source has its own record ID.

## If you get stuck

- Edit an unsent draft through its permitted draft controls. If uncertain whether Save succeeded, reload the date-filtered register and open the existing row before trying again.

# Enter a week and submit eligible drafts

Reference procedure · current controls/source checked; mutations not exercised in this role lab

**Go here:** Time → Enter a week in a table; Submit this week

The weekly table is a faster entry tool for your own actual daily work. Blank days are skipped. Planned hours remain separate. Review existing rows first so a second table save does not duplicate a day already entered.

Copy previous week layout copies layout with zero hours. It does not assert that last week's work happened again. Select the destination Week of, choose Copy previous week layout, inspect displayed Previous week and This week, then Add this week's layout. There are no editable Source/Destination date fields in that flow.

Submit all week drafts handles eligible drafts for your own selected week. A linked correction may appear in the draft count; do not assume weekly submission universally excludes corrections. This lab used individual Submit for the correction so its original link could be inspected. Chief's own ordinary weekly submission was separately exercised.

## Do the task

1. Open Enter a week in a table; set Week of and Project, then enter actual hours and activities on worked days. Use Save daily drafts.
2. Open Submit this week. Select the week, read the draft count and inspect each relevant draft before Submit all week drafts.
3. Refresh the register and inspect resulting states. For a correction, individual detail Submit makes the original/replacement link easy to verify.

## Verify the result

- Draft is distinct from Submitted. A zero-hour copied layout is incomplete until actual work is entered.

## If you get stuck

- A blocked or changed draft must be reviewed through its exact record. Do not repeatedly resubmit the whole week to force a guarded source.

# Enter a week and submit eligible drafts

---

1 draft entries ready · 2026-10-12 → 2026-10-18

## Before you continue

Submitting this week sends all 1 draft time entries for 2026-10-12–2026-10-18 for review, along with any draft meal expenses linked from Log time. Check each entry before continuing.

[Review week drafts](#)

Submit all week drafts

Native Worker 2 weekly summary included one linked correction draft; this figure does not claim a bulk correction submission test.

# Correct returned time and retain history

Isolated BBS role lab · genuine Worker account · fictional October 2026 records

**Go here:** Time → returned source → Create corrected draft

Worker 2 recorded three hours on October 15, outside their finalized October 1–14 settlement. The genuine PM returned it for a correction to 2.5 hours. A correction creates a linked replacement and preserves the original record.

After a corrected draft is created, inspect all values and the original link before submission; the detail does not offer an unrestricted edit of that correction. An unsubmitted correction may offer Withdraw correction draft with a required reason; withdrawal was observed as a control but not exercised here.

## Do the task

1. Open the Needs changes source and read the reviewer's reason. Use Create corrected draft.
2. Set Actual hours to 2.5, review date/category/activity and enter a concrete Correction reason. Create the draft.
3. Open the linked Draft and use individual Submit. The permitted reviewer then operationally approves it.
4. Filter October 15 and inspect the current register. Do not add the old and replacement durations together.

## Verify the result

- The original 3 h remains Needs changes; the linked 2.5 h is Approved. Together with the separately corrected delegated travel entry of 0.75 h, current approved activity is 195 minutes = 3.25 h.

## If you get stuck

- If the reason or values are wrong, contact the reviewer before creating another version. No duplicate unlinked row should be used as a correction.

## Correct returned time and retain history

# Hand settled compensation changes to Finance

---

Isolated BBS role lab · genuine Worker account · fictional October 2026 records

**Go here:** Time → returned source → Create corrected draft

The Worker 1 October 6 source was fresh and unbilled, yet its worker compensation period was already covered by a finalized October 1–31 settlement. Attempting the returned 4 h → 3.5 h correction was refused.

The exact message was: “This time has settled or paid worker compensation. Contact Finance for an explicit adjustment before any new correction.” A fresh work date or absence of an invoice does not override a finalized worker-side settlement.

## Do the task

1. Read the guard and keep the existing returned source intact.
2. Send Finance/Owner the source ID, worker, project, date, current/desired hours and correction reason. Wait for their supported explicit adjustment process.

## Verify the result

- No replacement draft was created by the refused operation. The finalized USD 720 settlement was not changed.

## If you get stuck

- Do not add an unlinked replacement, shift the work date, change the worker or ask someone to erase settlement history to bypass the guard.

Worker

Actual expected guard for Worker 1; this is a tested blocked state, not a successful correction.

# Record one expense with private receipt evidence

Isolated BBS role lab · genuine Worker account · fictional October 2026 records

**Go here:** Expenses → Record expense

The worked expense is an explicitly synthetic USD 12 tools/consumables purchase on October 6, paid by Worker 1. Its image says training only and no real purchase. A receipt upload is private evidence, not proof that Finance has approved reimbursement or that a bank transfer happened.

The native form accepts JPG, PNG, HEIC or PDF receipts up to 10 MB. Operational purchase amount, who paid, worker reimbursement and customer recovery are separate. Preserve the actual receipt currency and payer.

## Do the task

1. Choose Record expense. Attach Receipt image or PDF, select Project, Date and Category, and fill Amount, Currency, Who paid and Description. Vendor/payment method and local time/related hours are offered contextual fields.
2. Use Save draft. Open the saved expense and inspect the registered private receipt and all purchase values.
3. Use Submit on the detail. The genuine PM operationally approved the expense; Finance then saved Reimburse at cost / Bill at cost and recorded Finance review.

## Verify the result

- Exactly one expense exists for USD 12, Worker payer, with its registered receipt. Own receipt download returned HTTP 200. Financial eligibility does not itself record reimbursement.

## If you get stuck

- If receipt processing or permission prevents access, use the precise document status/message and ask support. Uploading/registered does not universally mean antivirus-clean. Do not duplicate a purchase while checking a failed submission.

Open private receipt

Submitted expense handed to operational review, then Finance classification.

# Use expense batch tools and corrections carefully

Reference procedure · current controls/source checked; mutations not exercised in this role lab

**Go here:** Expenses → Enter a week in a table; Submit this week

The weekly expense table records actual purchases, not planned budgets. Save daily drafts creates the offered day/project/person rows; attach each required receipt through the saved draft's permitted edit flow. A worker-paid cost may be non-reimbursable or non-billable under its dated policy.

Expense weekly submission checks the selected own draft set. A changed row or missing required evidence can block the set; resolve the named record rather than creating replacements. A returned or financially linked expense follows its permitted state-specific correction process.

## Do the task

1. Inspect existing expense rows and period before using the weekly table. Enter actual category, amount, currency, payer and description, then Save daily drafts.
2. Open each draft and attach/verify its receipt before submission.
3. Read the draft count under Submit this week and inspect results after submitting. For an already submitted/reviewed expense, open its detail and use only controls actually offered for that state.

## Verify the result

- Purchase totals agree with the receipts. A worker cannot make an expense reimbursable simply by selecting Worker as payer.

## If you get stuck

- Hand reviewed, paid or billed expense corrections to the applicable reviewer/Finance with original evidence. Never change a real purchase currency to avoid a missing conversion rule.

# Save and submit a daily field report

---

Isolated BBS role lab · genuine Worker account · fictional October 2026 records

**Go here:** Reports → New daily report

A daily report tells the operational story. It does not create actual hours, technical approval, customer acceptance or an invoice. The Worker exercise describes a fictional bench inspection and has its own report ID.

The actual form begins with Project, Work date, Site / shift, Shift summary and Tasks completed. It also offers Problems found, Corrective actions, Downtime minutes, Standby reason, Open items, Next day plan and a safety flag. Report actual conditions, including genuine risks; this training bench had no live production change.

## Do the task

1. Choose New daily report. Complete Project, Work date and the factual summary/tasks; fill applicable problems/actions/downtime/next-step fields.
2. Use Save daily report. Open the Draft report and inspect its header and content. Saving/autosaving content does not submit it.
3. Use Submit for review. Confirm Submitted. The genuine PM approved this source in the role lab.

## Verify the result

- Saved report progressed Draft → Submitted → Approved without adding hours. Submitted attachments/content are read-only in this account.

## If you get stuck

- Correct an unsent draft using its available edit controls. For submitted/returned/approved reports, use the offered correction flow or hand the specific record to the reviewer; do not overwrite approved history.

# Save and submit a daily field report

Saved Daily Draft header.

## Save and submit a daily field report

---

Daily Submitted after the separate review action; PM approval followed.

# Describe a technical change without treating it as permission

Isolated BBS role lab · genuine Worker account · fictional October 2026 records

**Go here:** Reports → New technical report

Technical reports identify a system and document Problem / symptom, Diagnosis / root cause, Change performed, validation, remaining risk and rollback. Submitting a report does not authorize a live PLC change or substitute for your employer's safety/change-control procedure.

The exercised report is explicitly a fictional bench. Offered fields include System / machine, Plant / site, Area / line, Station / machine, System type, PLC platform, Controller, HMI / SCADA, Network / protocol, Software version and Program / project reference. The actual save label is Save PLC report.

## Do the task

1. Choose New technical report. Identify the equipment and write the problem, diagnosis and change in readable factual language.
2. Fill Production impact, Validation performed/result, Open risk / issue, Rollback plan and safety impact where applicable. Use Save PLC report.
3. Open the Draft and inspect the details; use Submit for review, then verify the reviewer's resulting state.

## Verify the result

- The Worker report reached Submitted and was operationally approved by the genuine PM. No real PLC or live equipment was modified.

## If you get stuck

- A missing validation or safety decision needs a real responsible-person handoff. Do not invent a successful validation to make the report look complete.

# Describe a technical change without treating it as permission

**J&A AUTOMATION**

×

## New technical report

Operational report entry. Record what happened in the field.

**Change performed**

Documented proposed checklist correction; no live PLC changed.

**Validation result**

Training mismatch documented for review.

**Open risk / issue**

No live machine risk evaluated by this exercise.

**Rollback plan**

No live change; retain original training checklist.

Safety impact: technical lead review, validation and rollback detail required

Cancel

Save PLC report

Native Technical form for the fictional worker bench.

## Describe a technical change without treating it as permission

---

Technical report Submitted; it remains distinct from actual time and customer sign-off.

# Understand report PDFs, attachments and customer acceptance

Reference procedure · current controls/source checked; mutations not exercised in this role lab

**Go here:** Reports → your report detail

Permitted private attachments are evidence associated with a report. The offered upload types include PDF, ZIP, common images and UTF-8 text, with the displayed 50 MB limit. Use the actual type/note fields and current draft controls; do not upload unrelated personal or financial records.

A customer period PDF is a separate versioned report assembled by an authorized role. Customer acceptance binds genuine signer/evidence to the prepared version. Your own Daily or Technical approval does not itself establish customer sign-off. If underlying content changes, an authorized refresh creates a later version; it must not silently rewrite a signed snapshot.

## Do the task

1. Before submitting a report, attach the required authorized evidence through its attachment controls and verify the registered status.
2. Where Download is offered, wait for the artifact's ready state and open the native file. Hand missing/failed artifacts to the named responsible role.
3. Give the PM/Owner the report ID when its contents must be included in a period report or customer acceptance workflow.

## Verify the result

- Content, audience and report version are known. A downloaded report is not a recorded customer signature.

## If you get stuck

- Do not attach fabricated signed evidence, share private attachment links, or assume a saved draft has been delivered. Attachment/PDF/signature actions were not performed for these role reports.

# Read your own compensation and reimbursement

Isolated BBS role lab · genuine Worker account · fictional October 2026 records

**Go here:** My Pay → From / Through → Apply period

My Pay displays your own activity and governed compensation estimates, reviewed settlements, expected dates, actual recorded payments and reimbursement information. Customer invoice frequency and worker payment frequency are independent. Owner/Finance choose settlement periods and expected payment dates; there is no automatic worker payroll cadence demonstrated here.

Worker 1's historical monthly settlement is USD 720, scheduled November 3, actual paid zero. Daily compensation can differ from actual hours and customer billing units. Worker 2's October 15–16 approved 195 minutes shows a USD 900 Fixed Per Billing Period estimate; it is not an hourly prorated amount or proof that USD 900 was paid.

Exact activity is  $2.5 \text{ h} + 0.75 \text{ h} = 3.25 \text{ h}$ . My Pay summary rounds to one decimal (3.3 h and 0.8 h travel); rounding is not extra work. “No reviewed payments outstanding” can coexist with an estimate that has not yet become a reviewed settlement. A recorded payment is a business entry, not independent proof of a bank transfer.

## Do the task

1. Select From and Through, then Apply period. Read approved and pending amounts separately by currency.
2. Open the compensation statement/activity detail and compare exact time records. Read reviewed settlement period, scheduled date, paid and remaining balances independently.
3. Check reimbursement obligations separately from compensation and customer charges.

## Verify the result

- You see your own pay, not another worker's or customer invoice economics. Selected source dates may differ from a settlement's wider period.

## If you get stuck

- Ask Finance about missing rules, period coverage, reimbursement classification, payment references or discrepancies. Do not infer worker pay from a customer invoice or a planned date.

Rate rule active

Worker 1 own historical payment snapshot: scheduled is distinct from paid.

# Generate your own statement and check readiness

Isolated BBS role lab · genuine Worker account · fictional October 2026 records

**Go here:** My Pay → Worker statement

Generate report queues an own-worker PDF and CSV for the selected period. It does not expose Finance's project workbook. Queued, Ready and failed/preparation states must be checked before downloading.

The first October 15 attempt encountered an isolated operator-runner configuration error: its handler was unavailable. Its failed job history was preserved. A fresh October 15–16 native request was processed by the ordinary Worker Statement handler. Both PDF and CSV became Ready and were downloaded through the own Worker account; the receipt records their canonical hash checks.

## Do the task

1. Apply the intended From / Through dates and choose Generate report.
2. If queued, use Check statement status after processing. Use the offered PDF/CSV downloads only when Ready.
3. Check your identity, period, activity and currency in the downloaded output.

## Verify the result

- PDF and CSV Ready were observed in the native UI. Both own downloads succeeded. The artifact contains 195 approved minutes, two linked current sources, the selected October 15–16 period and the Worker 2 identity. The statement is scoped to the own account.

## If you get stuck

- For a failed or indefinitely queued statement, ask the Owner/support to inspect the artifact job using the period and exact status. Do not repeatedly submit the same request or claim that Queued means a delivered file.

# Use phone and tablet views

---

Isolated BBS role lab · genuine Worker account · fictional October 2026 records

**Go here:** Time; Expenses; Reports; More

Use a narrow screen's navigation rather than searching for the full desktop sidebar. The form may occupy a sheet; close it to return to the register. Wide tables can have an intentional internal horizontal scroll hint; the page itself should fit the viewport.

## Do the task

1. Open Time on your phone and filter the intended project/date. Use More for My Pay, Profile, Notifications or Help.
2. Enter a short draft only when the environment and person are confirmed. Inspect the saved result before leaving the form.

## Verify the result

- Worker Time was checked at 1440, 768 and 390 pixels: no page-level horizontal overflow.

## If you get stuck

- If a control or row is clipped, report the page, screen width, exact action and screenshot without credentials. Do not compensate by saving the same record twice.

# Maintain expertise, availability and account security

Reference procedure · current controls/source checked; mutations not exercised in this role lab

**Go here:** Profile → Expertise and availability; Account security

Your workforce profile is separate from account role, project assignment and compensation. The Worker 2 profile was inspected natively; security and availability mutations were not performed in this role exercise.

Add expertise offers the expertise choice and proficiency. Add availability opens a dated UTC availability window; availability is a planning signal, not published assignment or actual work. Passkeys use Device name and Register passkey. Authenticator setup can return a setup URI and one-time recovery codes; keep them private.

## Do the task

1. Inspect your expertise and availability calendar. Use the offered own-profile add/edit controls for genuine skill or availability information.
2. For an authorized security change use your own account's passkey/MFA controls, follow device/authenticator prompts and verify completion before signing out.
3. Store recovery material in an approved password manager. Never paste credentials or recovery codes into a report or support screenshot.

## Verify the result

- Expertise/availability changes do not grant review authority or create hours. No MFA/passkey success is claimed from this read-only inspection.

## If you get stuck

- Ask the Owner/support about unavailable expertise, incorrect timezone, access recovery or a lost device. Do not use another person's account as a recovery shortcut.

Native Worker 2 own profile read-only inspection; no security secrets were generated.

# Use notifications and escalate the right record

Reference procedure · current controls/source checked; mutations not exercised in this role lab

**Go here:** Notifications; Help

Opening a notification or marking it read is not operational approval, Finance review, payment or customer acceptance. Follow the underlying record and verify its current state.

Help provides role guides and Contact support. The verified support address is admin@j-automation.com. A live portal/webmail link is a live company service, not a training switch. No support email was sent in this exercise.

## Do the task

1. Open the notification and follow its record link. Check current state; old notifications can refer to a state that has since changed.
2. For help include role, environment identity, project/record ID, date, intended action and exact error; include a safe screenshot if useful.
3. Send operational corrections to the PM/reviewer, settlement/reimbursement questions to Finance and access/assignment issues to the Owner.

## Verify the result

- Authenticated Worker GETs returned 403 for Finance, Billing and another worker's time; own receipt returned 200. An archived Finance-only document returned 404, which alone does not prove the active-document access rule.

## If you get stuck

- Never include session cookies, passwords, recovery codes or another worker's private pay. Permission denial is a handoff signal, not a reason to switch credentials.

# Finish a workday and verify the handoff

Isolated BBS role lab · genuine Worker account · fictional October 2026 records

**Go here:** Today → Time → Expenses → Reports → My Pay

Use this task checklist on your own project. A saved draft is not a completed workday, and a submitted source still needs the appropriate review.

## Do the task

1. Confirm account/environment/project/date; inspect plans without treating them as actual work.
2. Record actual hours once; inspect and submit the intended drafts.
3. Record each purchase once, preserve payer/currency and attach its real authorized receipt.
4. Save and submit the required Daily and Technical reports with genuine factual evidence.
5. Read returned reasons; create linked corrections where permitted, or hand settlement locks to Finance.
6. Check approved/pending sources and own My Pay; follow reimbursement/settlement questions separately from client billing.

## Verify the result

- Lab passes: native time/expense/report saving and submission, successful linked correction and PM approval, expected finalized-settlement guard, own receipt access, denied unrelated financial access and responsive views.

## If you get stuck

- Reference-only here: account onboarding/sign-in reset, weekly table/layout-copy mutations, bulk expense submission, report attachments/customer acceptance, expertise/availability/security mutations and real bank/email delivery. Native statement result is documented in the evidence appendix.

# What was verified and what remains a reference

Isolated BBS role lab · actual browser outcomes and explicit limits

**Go here:** Verification appendix

Native authenticated browser records, synthetic receipt fixtures and SHA-256 capture manifests are maintained with the guide. Account secrets are excluded. Original billed October 2–5 history and finalized worker settlements were preserved.

Actual saved/submitted/returned/approved states are distinguished from controls merely inspected. The Owner/PM/Finance handoffs used their own genuine role sessions. This evidence does not claim real bank transfers, live equipment changes or production transactions.

## Do the task

1. Own time saved and submitted; the PM returned it, and the finalized-settlement correction was refused without creating a replacement.
2. Worker 2 own three-hour source corrected through a linked 2.5-hour replacement, submitted and PM approved; original history retained.
3. Own synthetic USD 12 expense saved with receipt, submitted, PM approved and Finance classified/reviewed.
4. Own Daily and Technical reports saved, submitted and PM approved.
5. October 15 current approved activity 195 minutes=3.25 hours; old 3-hour and 1-hour sources excluded from current totals.
6. A published October 16 two-hour plan appeared under Upcoming assignments without creating actual time.
7. Own October 15–16 PDF and CSV statements Ready, native downloads 200, exact stored hash and length match.
8. Another Worker's statement downloads returned 404; Finance/Billing/other-worker Time denied; own private receipt accessible.
9. Desktop 1440, tablet 768 and phone 390 Time pages fit their viewports.
10. Additional connected planning lab: Owner published October 20 eight-hour plans to all three original workers; each saw their own card with zero actual time before native entry. Technician 1 saved/submitted six hours, the Chief saved/submitted seven for Technician 2 plus eight of its own; PM approved all three.

# What was verified and what remains a reference · continued

---

11. Additional weekly comparison: 6/8/-2 and 7/8/-1 displayed Needs note after approval; Chief 8/8/0 displayed Approved. Before membership coverage Expected was a dash. Native desktop/tablet/phone agenda and crew views fit 1440/768/390 viewports.

## Verify the result

- See the adjacent task checklist and role capture manifest for source IDs, screen widths, artifact integrity and expected permission denials.

## If you get stuck

- Reference-only or unperformed here: Account invitation/security recovery; Weekly table/layout copy mutations; Bulk expense and bulk linked correction submission; Report attachments/customer acceptance; Own skills/availability/security mutations; Actual bank transfer/email delivery.
