

Supplier Coordinator · BBS operational course

Authorized supplier personnel, actual team hours, corrections and operational reporting

Actual role sessions · Exact controls · Saved outcomes · Recovery and handoffs

Project: BBS · Ejemplo de manual Number: C-0050-P-20261005

Read Before you practise before following any financial or operational training exercise. The training database is separate from the live portal.

Contents

Before practising · live and training access	3
Access · activate the invitation and sign in	4
Trainer setup · prepare a normal cycle before exceptions	7
Review authority · who receives each source	8
Start with a supplier access profile, not an Owner account	9
Use the coordinator's restricted navigation	11
Verify the saved supplier roster and dates	14
Add a directory technician with the exact fields	16
Record actual duration for selected technicians	18
Inspect each saved team draft and submit to J&A	21
Create a linked correction for returned team work	24
Keep the before checkpoint and export the final filtered totals	27
Keep your own work separate and submit eligible weekly drafts	30
Save your own expense receipt and submit the facts	33
Create, submit and download your own Daily report	36
Create, submit and download your own Technical / PLC report	39
Maintain your own availability and secure access	43
Finish the supplier operational cycle	47
Planning appendix · turn work instructions into actual team facts	49
Coverage appendix · missing people, dates and work goals	54
Recovery · sources, obligations and immutable history	59
Security · verify your own device and recovery options	60
Verification · current coverage and historical evidence	62

Before practising · live and training access

The company portal <https://j-aautomation.com/j-aautomation/app> is LIVE. A link to it never enters a simulation. For practice obtain a separately provisioned training URL, your own account, the permitted fictional project and dates, a visible environment identifier and the trainer's reset procedure. Without those, use this guide as a read-only demonstration and enter only authorized genuine work.

Original BBS operational examples and some historical unpaid settlements were saved on the live deployment; their original exports were downloaded there. Later fictional issuance, payment, acceptance, correction and readiness exercises used isolated copies or separate synthetic portfolios. Each chapter identifies its dataset and checkpoint. A later screenshot does not change an earlier saved workbook or issued master.

A role, project membership, review permission, supplier authorization and dated crew delegation are separate. Use your own credentials. Inspect another person's permitted operational record without signing in as them. Ordinary workers and project managers do not receive customer prices, internal cost, margins or another worker's compensation.

Verify the result

- Confirm your displayed identity, the environment, project number and work dates before saving. For training/reset or lost access contact admin@j-aautomation.com; send the route, role, project/record reference, time and visible error. Keep passwords, activation links, recovery codes and cookies private.

If you get stuck

- For an empty project selector, ask the Owner to check account status and assignment/authorization coverage. Do not create a duplicate project or borrow another account.

Access · activate the invitation and sign in

Go here: Your trusted invitation → Activate your account → Return to sign in → Profile

Do the task

1. Check the portal address and named account against the invitation provided by the Owner. There is no public sign-up. For an already provisioned account, use the sign-in method supplied to you; do not attempt to activate someone else's invitation.
2. For a single-use activation link, open Activate your account. Enter Full name and choose a Password of at least 12 characters, then Activate account. Wait for Account activated. You can sign in now. Do not repeatedly submit while Activating... is displayed.
3. Choose Return to sign in. Enter your account Email and Password and select Continue to workspace. If you previously enabled MFA, complete Verify your identity with the current Six-digit code and Verify and continue. Use a recovery code only through the offered Use a recovery code control.
4. Open Profile and verify the own-account name/email/role in Account security. Check the navigation and assigned project. A newly activated account can have zero assignments; activation alone does not grant project access or supplier/chief authority.

Verify the result

- The activation success message precedes the separate sign-in. The illustrated new Worker signed in and reached their own Profile; no assignment or financial permission was implied.

If you get stuck

- An expired or already used link displays This invitation could not be activated. It may have expired or already been used. If activation already succeeded, return to sign in. Otherwise request a new invitation from the Owner; reloading does not renew the old link.
- For offline, temporarily unavailable or rate-limited activation, retain the entered name/password privately, restore connectivity or wait for the displayed retry interval, then retry. An unconfirmed response is not proof of an active account.
- For an incorrect password, inactive account or lost access, contact admin@j-aautomation.com from your verified account/contact channel. Supply identity and the visible error; never send the password. This guide does not promise a public password-reset form. The initial Owner is provisioned by the platform operator; an existing Owner provisions the remaining team.

Access · activate the invitation and sign in

J&A / INVITATION

Activate your account

Use a password of at least 12 characters. This invitation can be used once.

Full name Password Activate account

Account activated. You can sign in now.

[Return to sign in](#)

Isolated new recipient: the native activation success message. The password remains masked; this is separate from sign-in.

Access · activate the invitation and sign in

J&A / INVITATION

Activate your account

Use a password of at least 12 characters. This invitation can be used once.

Full name Password Activate account

This invitation could not be activated. It may have expired or already been used. Return to sign in if you activated it, or ask an owner for a new invitation.
[Return to sign in](#)

Reusing the same single-use training invitation shows the genuine recovery message. Return to sign in if already activated; otherwise request a new invitation.

Trainer setup · prepare a normal cycle before exceptions

Ask the trainer to provide the following checkpoint sheet before reproducing a lesson. Reusing a shared historical BBS period does not reset it. A production URL is never a training switch.

Checkpoint	Required starting condition
Identity and environment	Own correctly provisioned role/profile; isolated URL and visible environment identity.
Project and dates	Exact project number, timezone and unused eligible lesson dates; membership and relevant grants cover both current access and the work date.
Source state	Named source IDs and durations/amounts; ordinary starting drafts/submissions; no unrelated correction already open.
Financial/evidence locks	List issued/closed periods, finalized settlements and signed report versions. Teach ordinary correction on an unlocked scope first.
Expected outcome	Saved state, source count, actual total and appropriate own/customer/internal output. Include the receiving role and result.
Reset	Operator restores the prepared database AND private documents together to the named checkpoint while training is stopped. Trainees do not delete financial history to reset a lesson.

Verify the result

- The new normal Worker/Chief lesson uses BBS READINESS · normal work cycle (C-0050-P-2026100601) with initially unfinalized October work. Original BBS locked-period examples are exceptions. External/Supplier/PM October 13–19 and Finance October 26 demonstrations are separately labelled; Accounting can use a separate clean synthetic portfolio.

Review authority · who receives each source

Review is determined by the actual source, base role and current dated grants. Chief delegation alone grants recording, not approval. A Worker with Can review checked does not become a Project Manager or Finance user. Send a factual correction reason with every return.

Source / recorder	Operational reviewer and prerequisite	Next handoff
Internal own or chief-delegated time	Owner or Finance; assigned PM with current active Can review membership for this project.	Owner/Finance records commercial Billable or Non-billable review separately.
External/supplier time, including coordinator own time	Authorized Owner. Supplier authorization/recorder provenance keeps these sources outside the ordinary PM time queue.	Finance review follows Owner approval.
Own/delegated expenses	Owner or Finance; assigned PM with current project review grant. Check factual purchase, payer and evidence.	Owner/Finance classifies customer recovery and worker reimbursement separately.
Daily and Technical reports, including supplier profiles	Owner or Finance; assigned PM with current project review grant and permitted project scope.	Owner/Finance prepares the customer period report and version-bound acceptance where required.
PM's own work	Route it to another authorized reviewer for an independent factual check. Do not infer a universal self-review prohibition solely from a job title.	Personal reports/pay outputs remain own scope; financial treatment belongs to Owner/Finance.

If you get stuck

- If the intended source is absent, check source type, state, dates, assignment/review grant and supplier authorization before searching another queue. A review-enabled Worker Chief variant is not exposed by the current role model; Owner must provision the genuinely permitted reviewer role and grant. Never use a colleague's credentials to bypass this boundary.

Start with a supplier access profile, not an Owner account

Browser-verified isolated BBS project C-0050-P-20261005. All ROLE LAB records are synthetic training; they are not real dispatch, customer acceptance, purchase or payment.

Go here: Sign in → Supplier team

The Supplier Coordinator is an operational supplier profile linked to a supplier company and dated project authorization. Its underlying account can display Worker in Profile; the supplier access profile determines the restricted supplier workspace. It does not grant Finance, invoices, employee pay or J&A approval rights.

This exercise uses fictional BBS ROLE LAB Training Supplier on the SAME BBS project C-0050-P-20261005. The Owner created the supplier and accounts, authorized this coordinator for BBS October 5–31, and assigned the external technician. All work narratives and receipts are synthetic training.

Do the task

1. Use your own single-use invitation or assigned sign-in credentials. Enter email and password and choose Continue to workspace.
2. Open Supplier team. Confirm BBS in Installation / project and verify the project/date scope before recording technicians or hours.
3. Open Profile and confirm your own account. A Worker base-role label does not mean you have internal employee finance privileges.
4. Ask the Owner to verify supplier linkage, active account status, authorization dates and the correct coordinator when a project is absent.

Verify the result

- Native Owner onboarding and actual coordinator login succeeded; no role or session was fabricated.
- The coordinator project selector contained only the authorized BBS installation.

If you get stuck

- If no installation is offered, stop and request dated authorization from the Owner. Do not create an unrelated supplier or project.
- Never share the Owner's login with the supplier team. An operational directory record is not a login account.

Start with a supplier access profile, not an Owner account

Use the coordinator's restricted navigation

Browser-verified isolated BBS project C-0050-P-20261005. All ROLE LAB records are synthetic training; they are not real dispatch, customer acceptance, purchase or payment.

Go here: Supplier team → Time / Expenses / Reports / Operational report

Supplier team handles authorized personnel and team-hour drafts. Time, Expenses and Reports handle your own operational sources. Operational report shows permitted supplier work and approval state. Profile and Help support your own account and role guidance.

Finance, Billing and Approvals are restricted to other authorized roles. The coordinator can submit work to J&A; it cannot approve those sources or certify client acceptance.

Do the task

1. Use Personnel, Record team hours and Operational report tabs in Supplier team.
2. Select BBS, From, To and Language in Project and reporting period; choose Apply filters before interpreting a list or total.
3. On a phone use the visible primary navigation and More where offered. Scroll within long tables rather than assuming hidden columns are absent.
4. Use Profile for your own expertise, availability and security; use Help for the Supplier Coordinator path.

Verify the result

- Coordinator desktop, 390-phone and 768-tablet views were captured.
- Direct Finance and Billing requests returned 403 Access restricted; Approvals also returned 403.

If you get stuck

- Contact an owner is the handoff from a restricted screen. Returning to Supplier team does not grant the denied action.
- Recheck filters after a successful save: the resulting route may retain project/dates but change the active workspace tab.

Use the coordinator's restricted navigation

Back to workspace

Verify the saved supplier roster and dates

Native isolated BBS role exercise · C-0050-P-20261005 · synthetic October 2026 work only

Go here: Supplier team → Personnel

Personnel lists technicians within your supplier authorization. A directory technician and a login-enabled External Technician are different records. Directory creation does not activate an account.

Do the task

1. Select the authorized BBS Installation / project and inspect each name and Starts on / Ends on.
2. For this saved roster, the external technician is assigned October 5–31 and the directory technician October 6–31. Confirm the actual work date lies within both supplier authorization and technician assignment.
3. Ask the Owner to resolve missing supplier authorization or expired coverage before entering team work.

Verify the result

- The native saved roster and dated assignments were inspected.

If you get stuck

- A missing technician can reflect scope or dates. Do not add a duplicate directory entry to bypass an expired assignment.

Verify the saved supplier roster and dates

The screenshot displays the 'My supplier team' interface. On the left is a sidebar with navigation options: 'Supplier team' (selected), 'Time', 'Expenses', 'Reports', 'SECONDARY', 'Operational report', 'Profile', 'Help', and 'Company Webmail'. At the bottom of the sidebar is a 'Sign out' button. The main content area has a header with 'Online', a 'Go to section' dropdown, 'Webmail', 'EN' language selector, and a user profile for 'BBS ROLE LAB Supplier Coordinator Worker'. Below the header, the 'My supplier team' section includes instructions: 'Register technicians and actual work for authorized installations. J&A reviews submitted hours.' and 'Operational access only. Payments, rates and financial reports are not available to these accounts.' There are three tabs: 'Personnel', 'Record team hours' (active), and 'Operational report'. The 'Record team hours' tab contains a 'Project and reporting period' section with dropdowns for 'Installation / project' (BBS - Ejemplo de manual), 'From' (10/01/2026), and 'To' (10/06/2026), along with a 'Language' dropdown (English) and an 'Apply filters' button. Below this is a 'Record team hours' section showing '3 operational report · 0 drafts' and an 'Operational report' button. It includes instructions to 'Select one or more technicians. Shared values create separate, traceable drafts in one atomic save; review them before submitting to J&A.' and a 'Find technician' search bar. At the bottom are buttons for 'Add visible to selection', 'Clear selection', and a status '0 selected'.

Add a directory technician with the exact fields

Native isolated BBS role exercise · C-0050-P-20261005 · synthetic October 2026 work only

Go here: Supplier team → Add technician

Add technician creates an operational directory entry in the authorized installation. Account invitation, activation and login belong to the Owner.

Do the task

1. Choose Add technician. Required fields are Installation / project, Name and Starts on.
2. Optional fields are Email, Phone, Company, Contact name, Notes and Ends on (optional). Supply only accurate information; set end coverage when known.
3. Choose Add technician and verify the saved name and assignment dates in Personnel before recording hours.

Verify the result

- The native form labels and existing saved roster were inspected. A new duplicate technician was not created during this remediation.

If you get stuck

- An email in this directory form is contact information, not proof that a sign-in account exists.

Add a directory technician with the exact fields

Record actual duration for selected technicians

Native isolated BBS role exercise · C-0050-P-20261005 · synthetic October 2026 work only

Go here: Supplier team → Record team hours

Actual hours applies to each selected technician. Two selected people at 0.5 h each create two drafts totaling 1 team hour. Do not enter a combined team total as each person's duration.

Do the task

1. Select BBS and Work date 2026-10-14. Choose only the two technicians who performed the synthetic documentation activity.
2. Enter Category, Actual hours 0.5 and precise Work performed. Check the selected names, count 2, work date and per-person duration.
3. Choose Save selected drafts. Verify the success result reports two saved drafts, then inspect both individual sources before submission.

Verify the result

- Native saved drafts: external technician 01a11178-7915-7759-aec3-4df5406c5e2e and directory technician 01a11178-7918-765b-9139-1e242d1409a0, 30 minutes each.

If you get stuck

- If only some technicians are eligible, correct assignment/date scope before saving. Never assume the selected count proves every intended person was saved.

Native Save selected drafts result and saved selected technician work.

Inspect each saved team draft and submit to J&A

Native isolated BBS role exercise · C-0050-P-20261005 · synthetic October 2026 work only

Go here: Supplier team → Review drafts

Team submission is operational handoff. Supplier time is reviewed by the Owner. PM review of Daily or Technical reports is a separate workflow. See Review authority · who receives each source (review-authority) and Recovery · sources, obligations and immutable history (recovery-matrix).

Do the task

1. Open the saved drafts and compare name, work date, category, duration and activity for each person.
2. Select the intended drafts and choose Submit selected drafts. Verify the native success result and the exact sources now Submitted.
3. Check later review on each source. In the October 14 example Owner approved the external technician's 0.5 h and returned the directory technician's 0.5 h.

Verify the result

- Native two-draft submission succeeded. Later mixed review states were inspected, rather than inferred from a submitted count.

If you get stuck

- Keep unsent drafts separate from sources already submitted. An unavailable submit action requires checking source state and coverage.

Inspect each saved team draft and submit to J&A

The screenshot displays the 'My supplier team' web application. On the left is a sidebar with navigation options: 'Supplier team' (selected), 'Time', 'Expenses', 'Reports', 'Operational report', 'Profile', and 'Help'. Later Owner review differs by technician; inspect individual states.

Create a linked correction for returned team work

Native isolated BBS role exercise · C-0050-P-20261005 · synthetic October 2026 work only

Go here: Supplier team → returned row → Create correction

A returned row remains Needs changes. The linked replacement carries the corrected facts and reason; it does not erase the original.

Do the task

1. Open the returned technician source and read the Owner reason. In the correction form inspect Work date, Category, Duration in hours, Work performed and Reason for correction.
2. Enter the actual corrected duration and choose Create correction draft. Review the link to the original.
3. Submit the corrected draft to J&A, then reopen it after Owner review. Verify its state and exclude the returned original from approved totals.

Verify the result

- The October 14 duration correction 01a11189-198d-731d-9f8d-9e124aba990e first reached Submitted at 15 minutes. Owner then requested clearer offline activity wording without changing duration. The coordinator created and submitted linked replacement 01a11197-6484-75a6-8c75-dd7a30b82764; Owner approved the final 15-minute source. The final native report retains the original 30-minute source as Needs changes/superseded and the intermediate 15-minute source as Rejected; the latest 15-minute source is Approved.
- The historical October 6 correction 01a10e50-5f09-7290-8a50-92767e39e3f0 is Approved at 90 minutes; its returned 120-minute original remains historical.

If you get stuck

- Do not change the old source or count original and replacement together. Ask the Owner if the reason does not identify the actual correction needed.

0.25 · Actual hours · Approved

SYNTHETIC SC03: 0.25 actual hours reviewing offline fictional documentation; no live dispatch or equipment change.

Recorded by: BBS ROLE LAB Supplier Coordinator

Final native history: original 30-minute row Needs changes/superseded, intermediate 15-minute row Rejected, current 15-minute replacement Approved.

Keep the before checkpoint and export the final filtered totals

Native isolated BBS role exercise · C-0050-P-20261005 · synthetic October 2026 work only

Go here: Operational report → Download CSV

The earlier October 6 screenshot and CSV show two Submitted rows totaling 4 h. They document the before-review checkpoint. They cannot substantiate the later approved total.

The final October 6 filter shows 120 Approved minutes for the external technician and the directory technician's 90-minute Approved correction: 210 minutes = 3.5 h. Returned 120-minute directory source 01a10e4b-c344-754a-969c-73b0bcae1a1e is not counted twice. Later October work requires its own filters.

Do the task

1. Open Operational report, choose BBS, From 2026-10-06 and To 2026-10-06.
2. Compare both technician rows and Approved states. Choose Download CSV and verify two rows, 210 actual minutes and 3.5 actual hours against the filtered screen.
3. Retain the earlier 4 h Submitted export as before history; use supplier-final-oct06.csv for the final 3.5 h Approved evidence.

Verify the result

- Final native CSV matches Approved sources 01a10e4b-c33e-7033-a065-d3980b92c94d and 01a10e50-5f09-7290-8a50-92767e39e3f0. It contains operational activity and recorder attribution, with no commercial amounts.

If you get stuck

- Compare the same dates, technician scope and review states before reporting a discrepancy.

Keep your own work separate and submit eligible weekly drafts

Native isolated BBS role exercise · C-0050-P-20261005 · synthetic October 2026 work only

Go here: [Time](#) → [Weekly timesheet](#)

Your own time is a worker source, separate from technician team rows. Never record the same activity as both your own and a technician's work.

Do the task

1. Save truthful own time on the assigned BBS project. Submit an individual draft when ready.
2. For the week of October 12, inspect eligible ordinary draft 01a11181-d654-7628-afb8-8a4ea00b4539 and correction draft 01a11181-c862-75f1-a8a7-96688534e4c6, both version 1 and 15 minutes.
3. Choose Submit this week and verify both exact sources became Submitted. The returned October 17 original 01a11180-fb49-755b-b108-b0d6d641978c remains Needs changes.

Verify the result

- Native weekly submission included both ordinary and eligible linked correction drafts, count 2, and succeeded for both sources. These Submitted states do not prove approval or payment.

If you get stuck

- Copy previous week layout is a source-checked draft convenience, not proof of worked hours. Check dates and actual work before using it.

Actual two eligible own drafts before weekly submission.

Both exact own source IDs reached Submitted after the native weekly action.

Save your own expense receipt and submit the facts

Native isolated BBS role exercise · C-0050-P-20261005 · synthetic October 2026 work only

Go here: Expenses → New expense

An own expense belongs to the person who actually incurred it. Submission records operational facts; it does not classify company accounting or prove reimbursement.

Do the task

1. Choose BBS, Category, Date, Amount, Currency, Who paid, Description and Payment method. Vendor, occurrence time and related logged hours are optional where shown.
2. Choose a private receipt image or PDF. Save draft, then inspect amount/currency/payer, receipt filename and the saved receipt before Submit.
3. Choose Submit and reopen the own source. Verify Submitted and the registered private receipt link.

Verify the result

- Native October 16 source 01a11180-9dbf-7543-bdc9-f851e7de886a records USD 6.50, Project materials, Worker paid, a clearly fictional vendor and training cash. A unique synthetic receipt PDF was saved; Submit succeeded. No purchase or payment occurred.

If you get stuck

- If a receipt hash is already registered, inspect the existing private content. Do not repeatedly upload a duplicate or invent a new purchase to bypass the duplicate guard.

Save your own expense receipt and submit the facts

The screenshot shows the J&A Automation BBS Role Manual interface. The left sidebar contains navigation links: Supplier team, Time, Expenses, Reports (highlighted), Operational report, Profile, Help, and Company Webmail. The main content area is titled 'OPEN PROJECT' and features a large dark card with the text 'SYNTHETIC SC05 training documentation bench'. Below this card, there is a 'PDF' section with a 'Language' dropdown set to 'English', a 'Generate report' button, and a 'Download' button. The status 'Ready' is displayed. A 'Document preview' section at the bottom shows a placeholder for the report content. The top right of the interface includes a 'Webmail' button, a language dropdown set to 'EN', and a user profile for 'BBS ROLE LAB Supplier Coordinator'.

Native Ready English variant and Download after approval.

Maintain your own availability and secure access

Browser-verified isolated BBS project C-0050-P-20261005. All ROLE LAB records are synthetic training; they are not real dispatch, customer acceptance, purchase or payment.

Go here: Profile → Expertise and availability / Account security → Help

Coordinator Profile holds own expertise and availability without exposing compensation or client rates. Availability uses UTC. Security settings concern your own signed-in account, not an inspected supplier technician.

The Help screenshot includes the new English Supplier Coordinator BBS course and the broader supplier operations reference. Choose the role-specific course first, then consult the reference for shared tasks.

For invitation and sign-in use Access · activate the invitation and sign in (access). For MFA, devices and recovery use Security · verify your own device and recovery options (security).

Do the task

1. Open Profile and verify your own name/email. Inspect expertise and availability before recording or arranging work.
2. For an actual availability change choose Add availability, enter UTC Starts/Ends, select the status and Note, save and reopen. This mutation was not executed for the coordinator packet.
3. Use Register passkey or Enable MFA only on your own device with secure recovery storage. These controls were inspected; no credential/device mutation was performed.
4. Open Help, choose the desired language and Supplier Coordinator starting path. English role guides may be linked as a language fallback.
5. Sign out after use. Use the organization's approved contact path for an access problem rather than sharing another role's credentials.

Verify the result

- Actual coordinator Profile and Help loaded, including own workforce scope and role-specific starting guidance.
- No passwords, cookies, tokens or MFA recovery material were included in screenshots or manuals.

Maintain your own availability and secure access · continued

If you get stuck

- An account labelled Worker in Profile may still carry a supplier restriction; request the correct profile/linkage from Owner rather than trying Finance routes.
- Report UI problems with role, BBS reference, date, source state and exact action/error; omit private credentials.

Finish the supplier operational cycle

Browser-verified isolated BBS project C-0050-P-20261005. All ROLE LAB records are synthetic training; they are not real dispatch, customer acceptance, purchase or payment.

Go here: Personnel → Drafts → J&A review → Operational report

The coordinator's cycle is authorized personnel, accurate actual team drafts, explicit submission, returned correction when needed and an operational status export. J&A operational approval, Finance payment and customer acceptance are separate handoffs.

Native coverage includes saved roster inspection, selected team draft save/submission, Owner review and linked correction, exact final 3.5 h Approved CSV, own ordinary/correction weekly submission, own receipt expense submission, own Daily/Technical approval by PM, private Technical evidence upload, Ready PDF generation and downloads. Historical screenshots retain their checkpoint dates. See Verification · current coverage and historical evidence (verification).

Do the task

1. Confirm BBS authorization and each technician's work-date coverage before entering actual hours.
2. Review saved sources and submit the intended batch only once. Send the reviewer a clear project/date/source handoff.
3. Follow Needs changes through a linked correction and re-review; compare active totals with the retained original history.
4. Export the operational report with the correct period/state and describe its meaning. Hand financial and customer-acceptance questions to authorized J&A users.
5. Keep your own Time, Expenses and Reports distinct from technician team sources and report unresolved access/preview problems.

Verify the result

- No production data, real equipment, live dispatch, customer consent, outward mail or bank payment was changed or asserted by this training packet.
- Original BBS invoices and finalized financial history were preserved.

If you get stuck

- Do not duplicate work to fix a locked source or substitute an operational CSV for an issued invoice.

Finish the supplier operational cycle · continued

- If access ends or assignment dates expire, ask Owner to review the genuine authorization. A directory record alone cannot restore login.

Planning appendix · turn work instructions into actual team facts

Isolated BBS planning lab · real role browser sessions · fictional October 22–23, 2026 work · no production records or financial changes

Go here: Supplier team → Record team hours → Operational report

Supplier project authorization and personnel assignment establish who may work and on which dates. Internal published planning is separate. Supplier Coordinator navigation opens Supplier team and does not expose Today or Planning; the direct Planning route returns Access restricted. Arrange operational instructions through the Owner's approved coordination process.

The native October 23 exercise selected two existing fictional supplier technicians, used Same hours for everyone and entered one actual hour. Save selected drafts created two individual sources totaling two team hours, attributed to their respective technicians and Recorded by the coordinator. Shared entry is not one combined person record.

The actual work form remains a factual record. It does not accept a goal, finalize worker pay or disclose customer rates. A technician can inspect their own coordinator-recorded hour but cannot inspect the other technician's source.

Do the task

1. Open Supplier team. Choose BBS under Installation / project and Record team hours. Confirm each technician's displayed assignment dates cover 2026-10-23.
2. Choose Add visible to selection or select the intended technicians individually. Verify two selected. Set Work date 2026-10-23, Same hours for everyone, Actual hours 1 and the fictional Work performed summary.
3. Choose Save selected drafts. Confirm Batch saved: 2 drafts and 2 team hours. Saving alone does not submit them.
4. Set From and To to 2026-10-23 and choose Apply filters. Inspect both separate drafts, then Select up to 100 drafts. Verify the selection is exactly the intended two before Submit selected to J&A.
5. Open Operational report with the same project/date filter. Verify total two hours, individual one-hour rows and Recorded by attribution. Authorized J&A Owner review subsequently changes both sources to Approved.

Verify the result

- Native two-person batch save, explicit submission and Owner operational approval succeeded. Both source IDs retained 60 minutes and the correct person attribution.

Planning appendix · turn work instructions into actual team facts · continued

- Coordinator report totals 2; External Technician report totals only their own 1. Native desktop, tablet and phone report views loaded without application errors.

If you get stuck

- If drafts are absent immediately after saving, inspect the selected report period: a successful October 23 save is outside an October 1–6 filter. Update From/To before considering another save.
- Supplier hours are excluded from the ordinary PM Time approval queue. Hand their project/date/source IDs to an authorized J&A Owner; PM report review is a different workflow.
- Preserve the source and request a linked correction for reviewed facts. Do not enter another hour to attract review.

Planning appendix · turn work instructions into actual team facts

The screenshot shows the 'Record team hours' interface. On the left is a sidebar with navigation options: 'Supplier team' (selected), 'Time', 'Expenses', 'Reports', 'SECONDARY', 'Operational report', 'Profile', 'Help', and 'Company Webmail'. The main content area is titled 'Record team hours' and shows '3 operational report · 0 drafts'. There is a button for 'Operational report' and a note: 'Select one or more technicians. Shared values create separate, traceable drafts in one atomic save; review them before submitting to J&A.' Below this is a 'Find technician' search bar. Two selection buttons are present: 'Add visible to selection' and 'Clear selection', with a status '2 selected'. Two technician selection cards are shown, both checked: 'BBS ROLE LAB Coordinator-recorded Technician · 2026-10-06 — 2026-10-31' and 'BBS ROLE LAB External Technician · 2026-10-05 — 2026-10-31'. The 'Work date' is set to '10/23/2026' and the 'Category' is 'Work'. The 'Hours for the selected technicians' section has two radio buttons: 'Same hours for everyone' (selected) and 'Different hours for each person'. The 'Actual hours' field is set to '1'. There is a checkbox for 'Add start and end times' and a note 'Actual duration: 1 h'. A text input field for 'Work performed' contains the text: 'SYNTHETIC PLANNING LAB: two supplier technicians each completed one hour of fictional bench documentation; no live dispatch.' A 'Save selected drafts' button is at the bottom right. The footer indicates 'Developed by Álvaro Schwiedop Souto'.

Each entry lists '1 - Actual hours - Submitted' and 'SYNTHETIC PLANNING LAB: two supplier technicians each completed one hour of fictional bench documentation; no live dispatch.' Both are recorded by the 'BBS ROLE LAB Supplier Coordinator'. The footer indicates the system was developed by Álvaro Schwiedop Souto.

Two distinct one-hour sources Submitted, both Recorded by the Supplier Coordinator.

Planning appendix · turn work instructions into actual team facts

After authorized Owner review: two Approved one-hour sources and total actual hours 2.

Coverage appendix · missing people, dates and work goals

Isolated BBS planning lab · real role browser sessions · fictional October 22–23, 2026 work · no production records or financial changes

Go here: Supplier team → Record team hours; own Reports → Daily

The worked supplier authorization and technician assignments end October 31. Moving Work date to November 1 removed both eligible technicians, cleared the selection and disabled Save selected drafts. The app's No matching records hint mentions search/status generically; in this exercise the actual reason was date coverage. No November 1 source was saved.

An assigned project and a published plan are not interchangeable. This coordinator profile cannot inspect an internal agenda, publish plans or accept goals. A current supplier grant still does not enable the internal Planning calendar.

Use your own Daily report's Tasks completed, Open items and Next-day plan for truthful coordination notes. Those fields record narrative progress rather than a task status, a published shift, actual hours or customer acceptance. The External Technician chapter demonstrates the same native narrative fields through save, submission and PM operational approval.

Do the task

1. When personnel disappear, first verify Work date and the displayed assignment interval. Clear an accidental search and confirm BBS before requesting scope changes.
2. For November 1 in this exercise, stop: coverage ended October 31. Ask the Owner to confirm a genuinely authorized extension and supplier/project relationship. Do not shift the date to make a prohibited work entry save.
3. When a plan is missing, obtain the instructions from the authorized Owner/coordinator channel; return to Supplier team instead of repeatedly opening the denied Planning route.
4. For your own coordination narrative open Reports → New daily report. Describe your own completed tasks, unresolved items and proposed next-day steps, then follow Save daily report → Submit for review and the permitted review handoff.
5. For technician time inspect individual attribution and active totals. A goal description or future plan does not supply actual work evidence.

Verify the result

- Changing the native team form to an uncovered date removed eligible personnel and disabled saving. Read-only database verification confirmed zero exercise sources on November 1.

Coverage appendix · missing people, dates and work goals · continued

- Native restricted Planning showed Access restricted and a Supplier recovery link. Rates, costs, billing, pay and finance controls remained outside the coordinator workspace.

If you get stuck

- Include role, supplier, project, intended work date and exact missing/disabled control in an access request. Never include passwords or session material.
- A directory technician may have no login. Ask the Owner to distinguish personnel creation, individual account activation, supplier authorization and dated project assignment.
- For expected-hour discrepancies in your own Time screen, use the effective schedule target and Actual minus Expected; do not interpret a plan duration as the schedule target. Ask the Owner to investigate an unavailable — expectation.

Operational report

Phone operational report preserves person, actual duration, state and attribution. This capture is the Submitted checkpoint before Owner review.

Recovery · sources, obligations and immutable history

Use the role's worked correction lesson and the current record controls. A new purchase is different from a correction to an existing purchase. A payment reversal records a cash-entry correction; it does not amend a finalized compensation entitlement or unlock its time sources.

State	Supported next action
Ordinary Draft	Use Edit/Save draft where present; attach the actual receipt/evidence before Submit. Inspect each saved draft after weekly table entry.
Submitted	Read current state and reviewer handoff. Do not create another source merely because review is pending.
Needs changes	Read the reason. Time uses Create corrected draft where available, then submit/review the linked replacement. A returned Daily/Technical report instead offers Edit and Save changes on the same report, then Submit for review; follow the exact role lesson.
Rejected	Inspect the reason and contact reviewer/Owner. The time detail does not offer the same linked-correction route as Needs changes; do not assume that route exists.
Approved, unlocked	Use the offered linked correction, preserving the original. Re-review the replacement and refresh affected unissued drafts/report versions through their supported controls.
Issued, financially locked or finalized compensation	Stop source editing. Send source ID/project/date, original/correct values, reason, affected invoice/settlement and payment references to Owner/Finance. If no authorized amendment control exists, escalate to platform support.

If you get stuck

- For a finalized-compensation guard, send the exact source/date/reason and requested factual correction to Finance/Owner. Wait for a documented authorized resolution and explicit instruction about the source lock. Do not reverse a payment, change work dates or duplicate hours to evade the guard.

Security · verify your own device and recovery options

Go here: Profile → Account security; Profile → Add availability

Do the task

1. Check Account security identifies YOUR account even when an authorized workforce profile inspection shows another worker above it. Enroll only your own device. MFA is optional in this release.
2. For a passkey, enter Device name and choose Register passkey on the approved secure portal. Complete your device's creation confirmation. Verify Passkey registered for this account, the registered count and named device row. Cancelled/failed registration is not enrollment.
3. To retire your own lost/obsolete passkey, first confirm you retain another working sign-in method. Select Revoke on the exact device and verify Passkey revoked and removal of its row. If you cannot sign in, use the verified support route rather than another person's session.
4. For an authenticator, choose Enable MFA. Keep the setup URI and one-time recovery codes private in the approved password manager. Add the URI to your authenticator, enter its current six-digit Authenticator code and choose Verify MFA. Verify Enabled and Disable MFA appear; enabling without verification is not completed enrollment.
5. At a later MFA sign-in use Six-digit code → Verify and continue. If the authenticator is unavailable, choose Use a recovery code and enter one unused stored code. If neither method is available, contact admin@j-aautomation.com for identity-verified recovery. Do not send recovery codes or the setup URI to support.
6. To remove optional MFA while signed in, choose Disable MFA and verify Not enabled/Enable MFA. Confirm the intended own account before doing so. A successful settings change is separate from recovering a lost account.
7. Where Add availability is offered, fill Starts, Ends, Availability and Note using the displayed time basis, then Save availability. Verify the saved interval/status/note in the list; use Edit availability on that row and save the changed values. Availability is not project membership, a published shift or actual hours.

Security · verify your own device and recovery options

ACCOUNT MFA

Enabled

Authenticator app

MFA is optional. Enabling it returns the setup URI and one-time recovery codes; store them in an approved password manager.

Disabling MFA removes the authenticator check from future sign-ins. Review your account security before continuing.

Disable MFA

Isolated recipient's authenticator setup was verified; the native Enabled state is shown after secret URI/recovery codes disappeared. No usable security material is published.

Verification · current coverage and historical evidence

English readiness edition: 6 October 2026, based on repository abc12c0961b2 with the recorded readiness fixes. The publication receipt identifies the final commit and deployment. This edition teaches the permitted ordinary cycle and supported handoffs; it does not certify every contract, device or external service.

The current evidence lives in docs/evidence/bbs-readiness-20261006. Its correction register maps all 72 suite findings to tasks, browser evidence or precise reference/support boundaries. Role manifests identify source IDs, state transitions and downloaded artifacts. Historical 5 October outputs remain historical; new screenshots do not rewrite their totals or private bytes.

Recipient activation, actual authenticator verification and own passkey registration/revocation were exercised on a separate isolated recipient. The same account controls are shared, but enrollment was not repeated for every role or physical device. Offline/expired-link and lost-device paths remain precise references where not separately executed.

Weekly submission was exercised with one ordinary draft and one eligible linked correction for Worker, Chief, External Technician and Supplier Coordinator: two selected drafts became two Submitted sources and zero remaining drafts. This does not guarantee that locked, withdrawn, out-of-scope or ineligible corrections will submit.

A final Accounting cut succeeded in a separate clean Finance portfolio; an Auditor read and downloaded its outputs. Original BBS issuer-history and source-reconciliation blockers remain documented. Email transport, real bank movement, accountant approval and genuine customer acceptance are outside the synthetic tests.

Verify the result

- For a task described as reference, follow the exact named controls and prerequisites; do not infer that an illustrated outcome was executed. For support-only recovery, preserve the blocked source and obtain the documented receiving result before proceeding. Out-of-role financial information is intentionally excluded from operational guides.
