

Employee field guide

Real application screens with synthetic data; no customer information.

Contents

1. 1. Sign in with your invitation
2. 2. Today and the correct project
3. 3. Record actual work and travel
4. 4. Expenses, receipt uploads and private files
5. 5. Daily and Technical / PLC reports
6. 6. My Pay and payment status
7. 7. Connection and offline capture
8. 8. Calendars and your availability
9. 9. Help, Activity Inbox and access limits

Use only the portal address and verified support route stated in your invitation. This guide uses synthetic examples. Never share a password, MFA code, recovery code, receipt or session.

1. Sign in with your invitation

Choose English, Spanish or Portuguese with the language selector on the login page or in the portal. English is the default when no preference is saved. Your choice stays in this browser after reloading, signing out and signing in again.

If the invitation is linked to a company mailbox, open it from that mailbox and sign in with the account named in the message. If you were invited as an external worker, use the single-use invitation link to create your account. There is no public sign-up. If access or password help is needed, contact admin@j-automation.com; do not send passwords or security codes.

MFA is optional. If you choose it, open **Profile**, follow **Set up MFA**, store the one-time recovery codes privately, enter the authenticator code and choose **Verify MFA**. Ordinary portal work does not require an extra step-up request. Never send a password, code or session to another person.

2. Today and the correct project

Start on **Today** and select only the project where the work happened. If it is missing, ask a manager to check your assignment; do not record hours or expenses on another project. On a shared device, finish with **Sign out**.

3. Record actual work and travel

Open **Time**, enter the service date, activity and actual duration, and save the draft. A customer minimum or a planned ten-hour day never changes the actual time you report. Record travel separately when the project permits it; travel pay and customer billing can follow different rules. Review the date, duration and factual description before submitting.

Draft means you can still review it. Submitted means it awaits review. If a reviewer returns it, read the reason and submit the requested correction. An approved record stays in history: use the correction flow with a reason and let the authorized reviewer update it. Do not delete, duplicate or overwrite approved time.

4. Expenses, receipt uploads and private files

Open **Expenses**, choose the project, service date, category, amount, currency and the real payer. Select yourself only when you actually paid the expense. Attach one readable JPEG, PNG or PDF receipt and check that the complete receipt is visible before submitting. Keep the original until the upload is confirmed.

If an upload fails, is pending scan/quarantine, or is rejected, read the portal message, check the file type and connection, then retry from the same draft. If the status is unclear, refresh **Expenses** and check before uploading again; this avoids duplicate submissions. Do not use a company-paid purchase as an employee advance and do not upload replacement or altered evidence. Project documents and downloads remain private and role-scoped; a link does not grant access.

5. Daily and Technical / PLC reports

Use **Reports** for the report required by the work. **Daily** records a factual field summary. **Technical / PLC** records the system, work performed, validation, remaining risks and permitted attachments. The generated report PDF shows the persisted author's name and account email when available. Keep technical facts accurate and do not claim a test passed when it did not. Customer acceptance is a separate, money-free action; never sign for a customer.

6. My Pay and payment status

My Pay is your private view and shows only your own compensation and reimbursable expenses. An **estimated** amount is a working calculation. **Approved** means the authorized review accepted the amount. **Scheduled** means a payment is planned for the shown expected date. **Paid** means the payment record has an actual paid date; a scheduled date is not proof of payment. Ask the administrator if a status, expected date or actual date is unclear.

This private statement is not a payslip or tax document. Never infer a customer rate or another worker's pay from it or from a customer invoice.

7. Connection and offline capture

Use offline capture only when the portal says it is enabled. Keep the device secure, reconnect and confirm that the saved or synced state is shown before signing out. If offline is disabled, wait for a connection and retry through the portal rather than making a duplicate record.

8. Calendars and your availability

In **Projects**, select a day in the project calendar to see its agenda and open an authorized project. Planned work never creates actual hours. In **Profile**, the availability calendar shows your latest 200 windows. Choose a day to add a UTC availability window or an existing item to edit its state, start/end and note. Select Available, Unavailable or Tentative, save and reopen to verify. If the version is stale, reload before trying again. A project end date includes the last day; timed availability ends are exclusive.

9. Help, Activity Inbox and access limits

Open **Help** to download the guide assigned to your role. **Activity Inbox** at `/app/notifications` can link to a permitted source record; reading a notification is not approval. Workers use only their own assigned projects, records, files and My Pay. Finance, Billing, Accounting, Audit, staff follow-up, Closeout and approval queues are not Worker flows; an access denial is a boundary, not an error to bypass. Email is not the system of record: use the portal and `admin@j-aautomation.com`.
